LandScape Segment Descriptions

Standing Tall (M2)

Within occupations such as healthcare, protective services, and office administration, you'll find levels of status and income. Residents of Standing Tall market segments are at the higher ends of both scales, estimated chiefly on the neighborhoods' median income range, which is high- \$30,000s to the \$40,000s. They also have the second lowest ranking on public- assistance income in their market segmentation category: about 50- percent- the- national- average. Overall, these demographic facts put the Standing Tall residents in a very comfortable consumer category. Residents inhabiting these areas are overwhelmingly in their 30s, have high- school degrees, are single- parent households, and have an average number of children under their roofs. Specifically, Standing Tall segments have about a 50- percent- higher- than- average percent of single- parent homes, but well- over- two- times- the- national- average are with female- heads- of- households. These areas also have an over- 25- percent- higher- than- average number of divorcees and widows/widowers.

Urban Squires (A5)

Urban Squires have the greatest number of national- average measurements than other segments within the Creme de la Creme category. But, however ordinary these Urban Squire residents may appear, they are definitely living very comfortably compared to the nation as a whole, with a median income range in the \$70,000s and \$80,000s. The residents of these highly urban areas tend to be in their 30s, but weigh in at an average level in all other age categories. Other national- average measurements include married- with- children, income from wages, and social security income. Urban Squires' standout characteristics included a twice- the- national- average level of college- educated residents, a slightly higher level of residents employed in white- collar management and professional jobs, and a higher level of income from interest/dividends.

Still Standing (M3)

Residents of Still Standing neighborhoods may face greater challenges than most Americans, but you can't say they aren't trying. These areas are home to people in their 20s to low- 30s, who rank at the national- average in income from salaries and wages. However, they also show about two- and- a- half- times- average- higher rate of public- assistance income. These residents are working at a wide variety of jobs, including an over two- times- average level of employment in healthcare services; nearly two- times- average in building maintenance; and over 50- percent- above- average in protective services, food preparation, and personal care industries. All in all their positions are categorized as white- collar, unlike the Standing Tall segments, which work in similar fields, but weight in as blue- collar. But with a 50- percent- higher- than- average- level of residents without high- school educations, and a median- salary range in the low- \$30,000s or less, these residents may continue to carefully spend the money they bring home. Additional distinctions include a between 50- and- 75- percent- above- average percentage who've never married; a well above- average number of children; and a 50- percent- below- average number of married- couple households. Additionally, there is a 50- percent- higher- than- average percent of single- male parents and nearly two- times- average number of single- female parent families.

SM Seeks SF (F2)

SM Seeks SF neighborhoods are characterized largely by their 50- percent- higher- than- average level of singles who have never been married. Not only that, but they rank at more than two- times- the- average in non- family households. Some of the households in these highly urban areas have children, but only a few. Owing to their never- married status and relatively young age (20s and 30s), it's logical to assume that this group is in the market to change their single status into married- coupledness. As a result, they may seek out free- time activities with groups of young adults, but they have not put their lives on hold until they find a mate. Instead, they're likely spending equal amounts of time and money socializing and creating comfortable lifestyles. The residents have an average level of college education and have incomes in the \$30,000s and \$40,000s. In these Going it Alone neighborhoods, income is generated almost exclusively from salaries in white- collar occupations such as food preparation, maintenance, personal care, and healthcare. In fact, they measure at a 50- percent- higher- than- average level of food preparation jobs. Overall, they only show a slightly above- average level of income from public assistance - no doubt to help those with children- but- no- partner help make their single- incomes stretch to cover the essentials of life.

Solo Acts (F3)

Solo Acts are urban neighborhoods with relatively young single populations, but with an over- 50- percent- higher- than- average number of divorced residents. These 20- and 30- year- olds also have more children than other Going it Alone segments. Some of these residents are single due to the death of a spouse and because they've never been married. Whatever the reason, the households tend to be single females or males with some kids to take care of. With only a little college education and incomes in the \$30,000s and \$40,000s, it's not difficult to imagine this group struggling to make ends meet. They may, in fact, rely on family members and friends for a Friday night supper or weekend splurge at a theme park to ease their struggle - all the while keeping their calendars clear for any dating opportunities (to turn their single status into more comfortable couplehood). Incomes for this population are generated from a variety of white- collar jobs in food preparation, maintenance, healthcare, office administration, and personal care. They register a slight up- tick on the public assistance income measurement, which helps supplement their single- income households.

Regents (A6)

Regents are highly urban Creme de la Creme neighborhoods with the vast majority of their residents in their 40s, fewer- than- average children under 17 years old, and a higher- than- average number of 65- plus- year- olds. Though they have fewer children, the residents in these areas have a higher- than- national- average quota of married couples. Also higher- than- average are the number of college- educated residents, people employed in white- collar management and professional positions, and income from retirement investments/social security. The combination of income avenues, put these neighborhoods solidly in the \$70,000s to \$80,000s median annual income range - making their "middle- age" years extremely financially secure and materially comfortable.

Kindred Spirit (B3)

Kindred Spirits are home to people who keep America humming - because they are the ones doing the work, as well as their fair share of the spending. The residents of these Urban Cliff Climber neighborhoods are 20- to 30- years- old, married- with- children of all ages (but slightly more in the younger ranges), earning between \$40,000 and \$50,000, enjoying some years of college education, and employed in a cross- section of the nation's middle- class occupations. These residents earn an income slightly above the national- average in a wide range of jobs, such as protective services, food preparation, personal care, sales, office administration, construction, and repair services. With kids to raise and relatively good incomes, Kindred Spirits no doubt enjoy a big slice of classic middle- class life.

Apron Strings (G2)

Apron Strings & Hard Hats rank almost 50- percent- higher- than- the- national- average in single households. A slightly- above- average number of the predominately 30- year- old residents of this highly urban Struggling Alone category have never been married, but more often they are divorced or widowed: They measure 50- percent- higher- than- average in both circumstances. These singles have some children, creating neighborhoods with either single men or women raising children under 17 alone. In fact, the household compositions measure 75- percent- higher- than- average in single- parent families. Some of these residents have never been married, but over 50- percent- more- than- average are widowed or divorced. Apron Strings areas are below- average in education, measuring below- average on college and 50- percent- higher- than- average level of people without high- school degrees. This number correlates to their occupational categories, which are predominately in these areas: Those who have jobs work in blue- collar positions, with about a 50- percent- higher- than- average showing in healthcare, food preparation, building maintenance, production, and transportation. Incomes for this group are below or in the \$30,000s. Not surprisingly, they rely heavily on public assistance to make ends meet: Measuring at almost two- times- average in this area. Apron Strings' above- average number of 65- plus- year- olds are also pulling some income from social security. Overall, residents of Apron Strings & Hard Hats segments have their lives full just to keep it together.

Collegians (O7)

According to the U.S. Dept. of Labor's Bureau of Labor Statistics, in October 2004, 66.7% of high- school graduates from the class of 2004 were enrolled in colleges or universities across the United States. This is obviously a huge annual boon to retailers who sell the staples of college life, including low- cost dorm- style furniture, pens and notebooks, and inexpensive home furnishings. Collegians areas are home to currently enrolled college students living in either dorms or off campus areas dedicated to college students. Market researchers will find a very homogenous group of young adults within these unique areas. Collegians are home to residents sharing a median- age- range in the 20s and low- 30s. They are predominately not married, and have no children. Naturally, they all have high- school degrees. For those students who are working to help pay the ever- increasing cost of higher education, they are employed a mix of white- and blue- collar occupations, such as protective services (over- two- times- average), personal care (nearly two- times- average), and management and sales(nearly 50- percent- above- average). Through these jobs they generate annual incomes at the low- \$30,000s- or- less range. Residents in these areas generate almost no public- assistance income.

Hard Act to Follow (F1)

Hard Act to Follow segments are highly urban areas with a predominantly single population in their 30s and without children. In fact, these Going it Alone areas weight in with a nearly 50- percent- above- average level of singles. The households are single for a variety of reasons, including slightly higher- than- average levels of divorce, widowhood, and non- marriage. This group has some college education and an average annual income level in the \$30,000s and \$40,000s. The source of income for these singles is predominately wages from white- collar jobs in occupations such as office administration, food service, sales, healthcare, and personal care. One might logically expect to find Hard Act to Follow residents willing to explore dating opportunities, but not sitting at home on weekends waiting for the phone to ring. Instead, they're likely enjoying a full life of leisurely mornings over coffee and the newspaper, and evenings at movies, the theater, and museums.

Pushing Through (M4)

Pushing Through segments are similar to segments in many demographics as Still Standing such as age (20- to low- 30- years- old), except for one predominant distinction - they are home to the "blue- collar" workers in occupations such as healthcare, building maintenance, production, and transportation. In these employment fields, they rank at over two- times- the- national- average. However, their median annual income is still the same as residents of Standing Tall areas: the low- \$30,000s or less. Also, Pushing Through neighborhoods rank at between 50- and- 75- percent- above- average in residents who've never been married. In fact, they rank at 50- percent- below- average number of married- couple households, including a 50- percent- higher- than- average percent of single- male parents and nearly two- times- average number of single- female parent families. Other similarities to their Still Standing neighbors include: an above- average level of income from public- assistance (nearly three- times- the- national- average). Though many residents have high- school degrees, a two- times- average level of residents do not have high- school educations.

Gainfully Employed (C4)

True to their Urban Cliff Dwellers category, Gainfully Employed neighborhoods are distinguished by a dominant age range in the 30s. But they are not entirely generationally homogenous, because they are also home to an above- average number of 65- plus- year- olds. This fact speaks to their slightly- less- than- average percent of children in their largely two- couple families. This fact also gives these areas a nearly- dead- on- average income from wages and salaries, as well as a somewhat higher- than- average income from retirement/social security. For those who are still working, their primary occupations are production, repair services, transportation, office administration, and healthcare support. The salary range for Gainfully Employed is \$30,000s to \$40,000s.
