DUCHESNE COUNTY ZONING MAP

 A-10

 A-5

1. A-10, ten (10) acre minimum zone, is provided and designed to protect and encourage the continued use of land for agricultural purposes and to discourage the preemption of agricultural land for other uses. Other purposes of this district include the protection of the economic base of the county for such uses as forestry, oil and gas drilling, pipelines, petroleum storage and distribution and the protection of significant natural features of land, creeks, lakes, wetlands, air and the preservation of open areas for wildlife habitat and range livestock. This district is characterized by production farms and ranches, including smaller hobby farms. The A-10 district requires, for residential development, either a Tri-County health department approved nonpublic water source or a connection from a public water source to the family dwelling and a wastewater system permit. Representative uses within this district include, but are not limited to: family dwellings, barns, corrals, crops, livestock raising, farm dwellings, guest ranches, produce retail sales and petroleum drilling and storage. In no case shall parcels in the A-10 zone be reduced below ten (10) acres in size.

2. A-5, five (5) acre minimum zone. The purpose of the A-5 zone is the same as that of the A-10 zoning district. Construction of buildings for human occupancy in the A-5 district requires either a Tri-County health department approved nonpublic water source or a connection from a public water source to the building and a wastewater system permit. Proof of a public water connection is all that is required for property mapped in the A-5 zone to be zoned R-1 and proof of both a public water connection and a public sewer is all that is required for property mapped in the A-5 zone to be zoned R-1/2. It is not necessary to rezone property to the higher density zone when the official zoning map shows available public water service.
