Subject: Electrical Service at 151 Batson Dr. st Floor, Add 2 new phone jacks
1 in 49 Vine 1

Upon visual inspection of the existing electrical service at above named address we determined the service to be 1,200 amp 480 volt 3 phase Main Switch
The main service is located on the west side of the building adjacent to the loading dock entrance.
The 480 volt service is distributed throughout the building where at these locations the 480 volt service is also stepped down via transformer to 120/208 volt 3 phase to give the future tenant the convenience of multiple voltages for optimal convenience
After a thorough visual inspection the service appears to be in good working order.

Respectfully
Chris Shannahan
President
AA Electrical Service
