## 1.0 INTRODUCTION

At the request of Lucro Commercial Solutions, LLC, VERAcheck, ("Environmental Risk Advisory, Inc.") performed an analysis of government records search, historical research, and various mapping data (shown within the Records Search Section below) for the property located at 200 W Lancaster Ave, Reading, PA 19607 (hereinafter referred to as "subject site") and the surrounding properties.

## 2.0 SUMMARY

Based on the information assembled during research, the risk rating for the subject site is as follows:

**1**

### RISK SCORE CATEGORIES:

- 1: The environmental risk appears to be minimal and further investigation of the subject site and/or nearby properties reviewed as part of this analysis is not recommended.**
- 2: No risk issues identified, but tenant research finds suspect historical security type.
- 3: Adjacent or abutting concerns. Additional documentation may mitigate.
- 4: Subject site concerns. Additional documentation may mitigate.
- 5: Adjacent or abutting risk Issues. Additional investigation or inquiry may mitigate.
- 6: Subject site risk Issues. Additional investigation or inquiry may mitigate.

### 3.0 Review of VERAcheck's research (government records, tenant history, street maps, aerial imagery, topographic maps and elevation data/ground profiles. Note: Bookmarks provide links to each Research Section).

#### 3.1 Subject Site and Adjacent Area (within search radius of one-eighth mile)

##### **Tenant Research:**

RUNNERS SHOP sporting goods-retail/ 15+ yrs in business

Property type per client: Retail-Commercial - Mixed Use-Retail-Residential

*Note: [Historical research details](#) shown within Records Search Section which follows this Analysis.*

##### **Subject Site:**

No environmental records were identified for the subject site. **The risk therefore posed by the subject site itself is assessed to be low.**

##### **Adjacent Area:**

Two records of concern and twenty-three environmental permit records were identified for fourteen sites within the adjacent area. These records are not expected to present material risk to the subject site due to details identified during research, including but not limited to distance, status, physical setting and elevation data.

#### 3.2 Nearby Area (one-eighth to one mile search radius)

Sixteen records of concern and forty-four environmental permit records were identified for thirty-one sites within the nearby area. These records are not expected to present material risk to the subject site due to details identified during research, including but not limited to distance, status, physical setting and elevation data.

#### 3.3 UnMappable Sites

Thirteen records of concern and forty-eight environmental permit records were identified for sixty-one unmappable sites. These records are not expected to present material risk to the subject site due to details identified during research, including but not limited to the nature of the record and the status.

*Note: Unmappable sites are sites, for which the location could not be identified with acceptable accuracy. This is most often due to incomplete and/or incorrect address/location information provided by the regulatory agency.*

### 4.0 Limitations

#### 4.1 Purpose

The purpose of this research and review was to identify potential environmental concerns associated with the subject site and adjacent properties.

#### 4.2 Terms, Conditions, and Methodology

This Limited Environmental Site Assessment has been prepared for the exclusive use of Lucro Commercial Solutions, LLC. VERAcheck will not distribute any information regarding this assessment without prior written authorization from Lucro Commercial Solutions, LLC.

This report is based upon data and information obtained from sources deemed to be reliable; no representation or warranty is made as to the accuracy of information obtained from third parties.

VERAcheck ensures that it uses the most up-to-date information as is reasonably obtainable for the compilation of its Reports.

This analysis included a review of publicly available government records. Please refer to your copy of the Risk Assessment Guidelines for Analysis of Government Environmental Records Report for detailed explanation of the risk assessment methodology.

This warranty stands in lieu of all other warranties, expressed or implied. While this report can be used as a guide, it must be understood that it is neither a rejection nor an endorsement of the property.

The opinions in this report characterize the environmental status of the property on the date of the report preparation. To ensure continuing validity, this report must be updated with the passage of time.

VERAcheck, has no present or future interest in the property. VERAcheck's employment and compensation for preparing this report are not contingent upon our observations or conclusions.

**CERTIFICATION:** This Analysis was completed by Johnetta Best, Environmental Professional and Chemist. Johnetta has over 24 years of experience as an Environmental Professional and Chemist and has been an Analyst with VERAcheck for over 15 years.

Please note that questions regarding this Analysis can be answered by any of the Environmental Professionals within VERAcheck's Analyst Group.

**Case 01 Defendants:** Case Number: 03-2016-0160  
Named in Complaint and Settlement: GOVERNOR MIFFLIN SCHOOL DISTRICT

**Case 01 Details:** Case Number: 03-2016-0160  
Violations: AHERA LEA - Management Plan

Relief Sought: **Penalty**

Regional Dockets: TSCA-03-2016-0160

Case Pollutants: ASBESTOS

Case Penalties: Compliance Action Cost: \$6,666

**Case 01 Milestones:** Case Number: 03-2016-0160  
Case Milestones: 8/10/2016 - Complaint Filed/Proposed Order | 8/10/2016 - Final Order Issued | 8/10/2016 - Enforcement Action Data Entered

**Case 01 Case Law Sections:** Case Number: 03-2016-0160  
Case Law Sections (Rank Order): EPA Regulations - Asbestos in Schools (1)

**Case 01 Enforcements:** Case Number: 03-2016-0160  
Enforcement Type: TSCA 207 AO For Asbestos/Schools (LEA); Activity Name: GOVERNOR MIFFLIN SCHOOL DISTRICT; Activity Status: Final Order Issued (8/10/2016); Activity Type: Administrative - Formal; Region: 03; Fiscal Year: 2016; Case Name: GOVERNOR MIFFLIN SCHOOL DISTRICT; Lead: EPA; Enforcement Outcome (Code): Final Order With **Penalty** (ECP); Enforcement action resulted from self-disclosure: No; Enforcement Summary: A CONSENT AGREEMENT AND FINAL ORDER ( CAFO ) WAS FILED RESOLVING VIOLATIONS OF THE ASBESTOS HAZARD EMERGENCY RESPONSE ACT ( AHERA ) UNDER THE TOXIC SUBSTANCES CONTROL ACT ( TSCA ). AN EPA INSPECTION AT THE SCHOOL DISTRICT FOUND THAT THE DISTRICT FAILED TO MAINTAIN AN UPDATED COPY OF THE AHERA MANAGEMENT PLAN IN ONE OF ITS MIDDLE SCHOOLS. THE AHERA MANAGEMENT PLAN IS USED TO NOTE THE LOCATION AND CONDITION OF ASBESTOS-CONTAINING MATERIAL (ACM) THROUGHOUT THE SCHOOL AND MUST BE AVAILABLE FOR REVIEW BY PARENTS, TEACHERS, AND EMPLOYEES. A MANAGEMENT PLAN HELPS PREVENT ASBESTOS EXPOSURE BY ENSURING THAT ANY MAINTENANCE OR OTHER ROUTINE SCHOOL ACTIVITIES WILL NOT RESULT IN THE DISTURBANCE OF ACM. THE GOVERNOR DISTRICT SPENT OVER \$6,666.00 TO COMPLY WITH AHERA REGULATIONS.

**Case 01 Enforcement Conclusions:** Case Number: 03-2016-0160

## REFERENCED SOURCES

**Fed, ARPP**

**Fed, Active Reg Pesticide Producing Facilities** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 11/7/2020.)

The Active Registered Pesticide Producing Facilities Database lists the most current non-Confidential Business Information (CBI) of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS).

**Fed, BRF**

**Fed, Brownfields** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

With certain legal exclusions and additions, the term "brownfield site" means real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Since its inception in 1995, EPA's Brownfields Program has grown into a proven, results-oriented program that has changed the way contaminated property is perceived, addressed, and managed. EPA's Brownfields Program is designed to empower states, communities, and other stakeholders in economic redevelopment to work together in a timely manner to prevent, assess, safely clean up, and sustainably reuse brownfields. It is estimated that there are more than 450,000 brownfields in the U.S. Cleaning up and reinvesting in these properties increases local tax bases, facilitates job growth, utilizes existing infrastructure, takes development pressures off of undeveloped, open land, and both improves and protects the environment. Initially, EPA provided small amounts of seed money to local governments that launched hundreds of two-year brownfield "pilot" projects. Through passage of the Small Business Liability Relief and Brownfields Revitalization Act, effective policies that EPA had developed over the years were passed into law. The Brownfields Law expanded EPA's assistance by providing new tools for the public and private sectors to promote sustainable brownfields cleanup and reuse.

Brownfields grants continue to serve as the foundation of EPA's Brownfields Program. These grants support revitalization efforts by funding environmental assessment, cleanup, and job training activities. Brownfields Assessment Grants provide funding for brownfield inventories, planning, environmental assessments, and community outreach. Brownfields Revolving Loan Fund Grants provide funding to capitalize loans that are used to clean up brownfields. Brownfields Job Training Grants provide environmental training for residents of brownfields communities. Brownfields Cleanup Grants provide direct funding for cleanup activities at certain properties with planned greenspace, recreational, or other nonprofit uses.

EPA's investment in the Brownfields Program has resulted in many accomplishments, including leveraging more than \$14.0 billion in brownfields cleanup and redevelopment funding from the private and public sectors and leveraging approximately 60,917 jobs. The momentum generated by the Program is leaving an enduring legacy. The Brownfields Program and its partners have provided guidance and incentives to support economic revitalization, and have empowered communities to address the brownfields in their midst. EPA's Brownfield Program continues to look to the future by expanding the types of properties it addresses, forming new partnerships, and undertaking new initiatives to help revitalize communities across the nation.

**Fed, CDL**

**Fed, Clandestine Drug Labs** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

The mission of DEA's Chemical Control Program is to reduce the supply of illicit drugs and diverted chemicals by disrupting and dismantling the operations and financial infrastructures of major trafficking organizations. The production of illegal drugs such as methamphetamine, cocaine, heroin and MDMA (ecstasy) requires enormous quantities of precursor chemicals. The Chemical Control Program works with domestic and international partners to target the drug and chemical trafficking organizations most responsible for the production, distribution, and diversion of precursor chemicals.

**Fed, ERNS**

**Fed, Emergency Response Notification Sys** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 7/5/2020.)

The "Emergency Response Notification System" (ERNS) ERNS is a national database used to store information on releases of oil and hazardous substances. Its primary purpose is to standardize and collect notifications made to the federal government under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the Superfund Amendments and ... Reauthorization Act (SARA), the Clean Water Act (CWA), and the Hazardous Material Transportation Act . Since its inception in 1986, ERNS has received over 170,000 release notifications.

The ERNS program is a cooperative data sharing effort among EPA Headquarters, DOT Research and Special Programs Administration's John A. Volpe National Transportation Systems Center (VNTSC), and the National Response Center (NRC) (a nationwide response center for chemical emergencies, staffed by the U.S. Coast Guard and sponsored by 14 federal agencies). EPA manages and funds ERNS, and the VNTSC provides operation and maintenance support through an interagency agreement with EPA.

Currently, ERNS data are used to assist decision-makers in emergency response and release prevention issues. Specific examples of ERNS data applications include guidance and regulatory development, responses to congressional inquiries, response preparedness, compliance and enforcement support, statistical and trend analysis, environmental planning, spill prevention programs, legal analyses, property transfers/site audits, and academic research.

**Fed, FHWC**

**Fed, Hazardous Waste Compliance Docket** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

Since 1988, the Environmental Protection Agency (EPA) has maintained a Federal Agency Hazardous Waste Compliance Docket (the "Docket") under Section 120(c) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Section 120(c) requires EPA to establish a Docket that contains certain information reported to EPA by Federal facilities that manage hazardous waste or from which a reportable quantity of hazardous substances has been released. The Docket is used to identify Federal facilities that should be evaluated to determine if they pose a threat to public health or welfare

[service@verachek.com](mailto:service@verachek.com)

and the environment and to provide a mechanism to make this information available to the public. The Docket contains information that is submitted by Federal facilities under the following authorities: CERCLA Section 103 and RCRA Sections 3005, 3010 and 3016. EPA is required to publish a list of newly reported facilities in the Federal Register. CERCLA Section 120(d) requires EPA to take steps to assure that a Preliminary Assessment (PA) be completed for those sites identified in the Docket and that the evaluation and listing of sites with a PA be completed within a reasonable time frame. The PA is designed to provide information for EPA to consider when evaluating the site for potential response action or inclusion on the National Priorities List (NPL).

#### Fed. FRS

**Fed, Facility Registry System** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

The Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel. The FRS provides Internet access to a single integrated source of comprehensive (air, water, and waste) environmental information about facilities, sites or places.

FRS has over 1.5 million unique facility records linking over 2.0 million program interests such as: Toxic Release Inventory Submitters (all years: 1987 - 2002); Resource Conservation and Recovery Act Information (RCRAInfo) ; Risk Management Plans (RMPs) ; Permit Compliance System (PCS) - Majors and Minors ; Biennial Reporting System (BRS) 1995/1997 ; Aerometric Information Retrieval System (AIRS)/AIRS Facility Subsystem ; Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); State master records from Pennsylvania, Utah, Mississippi, South Carolina, Nebraska, Minnesota, Ohio, Indiana, Maryland, Georgia, Oregon, Hawaii, and Washington.

#### Fed. FUDS

**Fed, Formerly Used Defense Sites** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

is responsible for the environmental restoration (cleanup) of properties that were formerly owned by, leased to or otherwise possessed by the United States and under the jurisdiction of the Secretary of Defense prior to October 1986. Such properties are known as Formerly Used Defense Sites or FUDS. The U.S. Army is DOD's lead agent for the FUDS Program. The U.S. Army Corps of Engineers executes the FUDS Program on behalf of the U.S. Army and DOD. The U.S. Army and DOD are dedicated to protecting human health and the environment by investigating and, if required, cleaning up potential contamination or munitions that may remain on these properties from past DOD activities.

The scope and magnitude of the FUDS Program are significant, with more than 10,000 properties that have been evaluated to be included in the FUDS Program. Information about the origin and extent of contamination or munitions, land transfer issues, past and present property ownership, applicable laws and DOD policies must be evaluated before DOD considers a property eligible for Defense Environment Restoration Account funding under the FUDS Program. Environmental cleanup at FUDS properties is conducted under the Comprehensive Environmental Response, Compensation and Liability Act.

As of Sept. 30, 2019, approximately 5,440 FUDS nationwide have been identified for investigation and cleanup. Of these sites, cleanup has been completed on 3,700 sites, leaving 1,736 sites identified where cleanup actions still require a CERCLA response. A single property may have more than one cleanup project. The type of cleanup required varies from property to property, and can include cleaning up hazardous, toxic and radioactive waste sites; removing munitions and explosives of concern and munitions constituents; or doing building demolition and debris removal if the building or structure was unsafe at the time of transfer.

In accordance with DOD Instruction 4715.07 Defense Environmental Restoration Program and DOD Interim Risk Management (IRM) procedures, the U.S. Army Corps of Engineers is implementing IRM by conducting a Notification and Safety Education initiative at FUDS where investigations, removal actions or remedial actions are not planned to be conducted for an extended period of time.

#### Fed. HMP

**Fed, HMIRS Pipeline** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 8/17/2020.)

Distribution, Transmission, and Liquid Accident and Incident Data. The Research and Special Programs Administration's (RSPA) Office of Pipeline Safety (OPS) maintains the Hazardous Liquid Pipelines Accident Report database, which contains data describing accidents involving hazardous liquid pipelines. To be reportable, an event must result in (a) an explosion or fire not intentionally set by the operator, (b) a loss of 5 or more gallons of hazardous liquid or carbon dioxide, excepting some spills under 5 barrels that do not cause water pollution or that result from maintenance activity, (c) death of any person, (d) personal injury necessitating hospitalization, or (e) estimated property damage, including cleanup, recovery, value of lost product, and damage to property exceeding \$50,000. Following an accident, pipeline operators are required to submit a report to RSPA (DOT form 7000-1) as soon as practicable, but not more than 30 days after the event. Reports are reviewed for accuracy and completeness by RSPA staff and entered into a database monthly. The database was established in 1970 and was revised in 1986 and 2002. Before 2002, between 80 and 250 new accident records were added to the database annually. In January 2002, RSPA reduced the threshold for reporting hazardous liquid pipeline accidents from 50 barrels to 5 gallons or 5 barrels, depending on the circumstances of the spill. As a result of this change, the total number of hazardous liquid pipeline accidents reported in 2002

[service@veracheck.com](mailto:service@veracheck.com)

will be much higher than the number reported in prior years.

**Fed, HMT**

**Fed, HMIRS Transport Permits** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 10/4/2019.)

Offerors and transporters of certain quantities and types of hazardous materials, including hazardous wastes, are required to file an annual registration statement with the U.S. Department of Transportation and to pay a fee (see Title 49 CFR Part 107, Subpart G (107.601 - 107.620)). The fee provides funds for grants distributed to States and Indian tribes for hazardous materials emergency response planning and training and to certain professional organizations for training purposes. This program began in 1992 and is administered by the Associate Administrator for Hazardous Materials Safety, Pipeline and Hazardous Materials Safety Administration (PHMSA).

**Fed, HMTI**

**Fed, HMIRS Transport Incidents** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 10/7/2020.)

PHMSA is a U.S. Department of Transportation agency that develops and enforces regulations for the safe, reliable, and environmentally sound operation of the nation's 2.6 million mile pipeline transportation system and the nearly 1 million daily shipments of hazardous materials by land, sea, and air. PHMSA comprises two safety offices, the Office of Pipeline Safety and the Office of Hazardous Materials Safety. Industries regulated by PHMSA are required to report incidents which meet or exceed established reporting criteria. Office of Hazardous Materials Safety has many programs that affect the safe and secure transportation of hazardous materials. These programs include Special Permits, Rulemaking, Outreach and Training and Enforcement.

The regulations in 49 CFR 171.15 and 171.16 of the PHMSA govern who should be informed and what information should be reported when an incident occurs. PHMSA provides access to this data through the Hazardous Materials Incident Reports Database.

**Fed, IAFS**

**Fed, ICIS AFS** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

AFS was shut-down and frozen as of October 17, 2014, and all compliance data was migrated to ICIS-Air.

The Air Facility System (AFS) contains compliance and permit data for stationary sources regulated by EPA, state and local air pollution agencies. The environmental regulatory community uses this information to track the compliance status of point sources with various programs regulated under the Clean Air Act.

Compliance data in AFS are maintained at two levels: plant and point. Plant-level compliance data track the compliance and classification status of the plant, inspections, and other compliance actions taken against the plant. Similar data also can be tracked at the point level.

AFS also includes data for management of facility operating permits. Current capability consists of tracking the steps in the permit issuance process. State and local air agencies report to AFS when they issue a Federal operating permit (a permit issued in accordance with Title V of the Clean Air Act of 1990).

The Operating Permits Program provides a mechanism for gathering together in one document all of the federal, State and local requirements applicable to air pollution sources.

AFS became operational in April, 1990. AFS replaced the National Emissions Data System (NEDS), the Hazardous and Trace Emissions System (HATREMS), and the Emissions Inventory System (EIS) for emission point source data reporting. The Compliance Data System (CDS), previously used by EPA and the states for compliance and emission point source data reporting, and the Continuous Emissions Monitoring Subset (CEMS), used for the maintenance of point continuous emission monitoring data, were also replaced by AFS.

**Fed, ICFEC**

**Fed, ICIS FE&C** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

The Integrated Data for Enforcement Analysis (IDEA) system incorporates Federal enforcement and compliance (FE&C) data from the Integrated Compliance Information System (ICIS), used to track federal enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act (CAA), the Clean Water Act (CWA), the Resource Conservation and Recovery Act (RCRA), the Emergency Planning and Community Right-to-Know Act (EPCRA) Section 313, the Toxic Substances Control Act (TSCA), the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund), the Safe Drinking Water Act (SDWA), and the Marine Protection, Research, and Sanctuaries Act (MPRSA). ICIS may contain duplicates of actions and penalties shown in the program databases (AFS, PCS, and RCRAInfo). Additionally, because ICIS-FE&C is the enforcement component of ICIS-NPDES, State cases are present for those States who have migrated their CWA NPDES data from PCS to ICIS-NPDES.

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal EPA enforcement cases. Case information is supplied and updated by EPA's Offices of Regional Counsel and Office of Civil Enforcement case attorneys. The basic structure of an ICIS FE&C record focuses on an enforcement case. It is assigned a case number and a case name which identifies the defendant (or principal defendant if more than one is named in the complaint). For administrative actions, the record includes the nature of the violation, statute(s) involved, and milestone dates (e.g., the date the order was issued). Judicial actions contain information similar to that for administrative actions, but include more detailed milestone dates.

**Fed, INPDE**

**Fed, ICIS NPDES** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 10/7/2020.)

The Integrated Data for Enforcement Analysis (IDEA) system incorporates data from the Integrated Compliance Information System National Pollutant Discharge Elimination System (ICIS-NPDES).

ICIS-NPDES is an information management system maintained by the Office of Compliance to track permit compliance and enforcement status of facilities regulated by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act (CWA). ICIS-NPDES is designed to support the NPDES program at the state, regional, and national levels. In November 1972, Congress passed a comprehensive recodification and revision of federal water pollution control law, known as the Federal Water Pollution Control Act (FWPCA) Amendments of 1972, marking a distinct change in the philosophy of water pollution control in the United States. The Amendments maintained the requirements for water quality-based controls, but added an equal emphasis on technology-based, or end-of-pipe, control strategies. The CWA recognized that the technology-based limits were not able to prevent the discharge of toxic substances in toxic amounts in all waterways. To complement its work on technology-based limits, the EPA initiated a national policy in February 1984 to control toxics based on a water quality approach. On February 4, 1987, Congress amended the CWA with the Water Quality Act (WQA) of 1987 which outlined a strategy to accomplish the goal of meeting water quality standards set by states.

Title IV, Permits and Licenses, of the FWPCA Act created the system for permitting wastewater discharges (Section 402), known as the National Pollutant Discharge Elimination System (NPDES). Under NPDES, all facilities which discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit provides two levels of control: technology-based limits (based on the ability of dischargers in the same industrial category to treat wastewater) and water quality-based limits (if technology-based limits are not sufficient to provide protection of the water body).

**Fed, NAMSE**

**Fed, NAMSEI** (Agency Contact: 1/1/2021. Data Update: 1/3/2021.)

Native American Management System for Environmental Impacts (NAMSEI) was developed for The Office of the Deputy Under Secretary of Defense (Installations and Environment) to track and maintain information on potential impacts to Native American Lands. This data set provides information on reported environmental impacts on American Indian and Alaska Native lands and resources resulting from Department of Defense activities.

**Fed, NMD**

**Fed, National Mines Database** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 11/9/2020.)

The mission of the Mine Safety and Health Administration (MSHA) is to administer the provisions of the Federal Mine Safety and Health Act of 1977 (Mine Act) and to enforce compliance with mandatory safety and health standards as a means to eliminate fatal accidents; to reduce the frequency and severity of nonfatal accidents; to minimize health hazards; and to promote improved safety and health conditions in the Nation's mines. MSHA carries out the mandates of the Mine Act at all mining and mineral processing operations in the United States, regardless of size, number of employees, commodity mined, or method of extraction.

The Mine Act requires the Mine Safety and Health Administration (MSHA) to inspect surface mines at least twice a year and underground mines at least four times a year (seasonal or intermittent operations are inspected less frequently). MSHA performs other important mandatory activities under the Mine Act. These include: -Investigating mine accidents, complaints of retaliatory discrimination filed by miners, hazardous condition complaints, knowing or willful (criminal) violations committed by agents of mine operators, and petitions for modification of mandatory safety standards; Developing improved mandatory safety and health standards; Assessing and collecting civil monetary penalties for violations of mine safety and health standards; Expanding programs for the education and training of miners, operators and agents; Reviewing for approval mine operators' mining plans and education and training plans; and approving and certifying the design of certain mining products.

**Fed, NPL**

**Fed, National Priority List** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

The National Priorities List primarily serves as an information and management tool. It is a part of the Superfund cleanup process. Section 105(a)(8)(B) of CERCLA (CERCLA Overview) as amended, requires that the statutory criteria provided by the Hazardous Ranking System be used to prepare a list of national priorities among the known releases or threatened releases of hazardous substances, pollutants, or contaminants throughout the United States. This list, which is Appendix B of the National Contingency Plan, is the NPL.

The identification of a site for the NPL is intended primarily to guide EPA in: Determining which sites warrant further investigation to assess the nature and extent of the human health and environmental risks associated with a site; Identifying what CERCLA-financed remedial actions may be appropriate; Notifying the public of sites EPA believes warrant further investigation; and Serving notice to potentially responsible parties that EPA may initiate CERCLA-financed remedial action.

Inclusion of a site on the NPL does not in itself reflect a judgment of the activities of its owner or operator, it does not require those persons to undertake any action, nor does it assign liability to any person. The NPL serves primarily informational purposes, identifying for the States and the public those sites or other releases that appear to warrant remedial actions.

**Fed, NPLP**

**Fed, National Priority List Polygons** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 2/4/2020.)

**Fed, NRCRS**

**Fed, NRC Reactors and Storage** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 4/7/2018.)

The U.S. Nuclear Regulatory Commission (NRC) was created as an independent agency by Congress in 1974 to ensure the safe use of radioactive materials for beneficial civilian purposes while protecting people and the environment. The NRC regulates commercial nuclear power plants and other uses of nuclear materials, such as in nuclear medicine, through licensing, inspection and enforcement of its requirements.

**Fed, NUCML**

**Fed, NRC License Permits** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 6/1/2016.)

The U.S. Nuclear Regulatory Commission (NRC) was created as an independent agency by Congress in 1974 to ensure the safe use of radioactive materials for beneficial civilian purposes while protecting people and the environment. The NRC regulates commercial nuclear power plants and other uses of nuclear materials, such as in nuclear medicine, through licensing, inspection and enforcement of its requirements.

**Power Reactors**

Demographic data on U.S. commercial nuclear power reactors, including: plant name/unit number, docket number, location, licensee, reactor/containment type, nuclear steam system supplier/design, architect-engineer, constructor, important dates, capacities, and links to plant-specific pages

**Power Reactors Formerly Licensed to Operate**

Demographic data on U.S. commercial nuclear power reactors that were formerly licensed to operate, but are now permanently shutdown. The available data include plant name/unit number, location, reactor type, nuclear steam supply system vendor, capacity, important dates, decommissioning alternative selected, current status, and related notes.

**Canceled U.S. Commercial Nuclear Power Reactors**

Demographic data on U.S. commercial nuclear power reactors for which licensing activities have been canceled. The available data include plant name/unit number, utility, location, containment type, capacity, cancellation date, and current status.

**Research & Test Reactors**

Demographic data on U.S. research and test reactors, including: licensee, location, reactor type, power level, licensee/docket number, and license date

**Research & Test Reactors under Decommissioning**

Demographic data on U.S. research and test reactors that are currently under decommissioning. The available data include licensee, location, reactor type, decommissioning alternative selected, power level, license/shutdown dates, and current status.

**Reactor Status**

Daily power reactor status for the past year, for each of the operating commercial nuclear power reactors in the United States

**Reactor Event Notification Report**

A summary of event notification reports for the past month, as they relate to operating nuclear power reactors in the United States. This summary includes the event number, description, and date; site/licensee names and locations (City, State, County, NRC region); license/docket number; unit number; how/when the NRC was notified; and other details regarding the state of the plant at the time of the event.

**Expected New Nuclear Power Plant Applications**

A catalog of new nuclear power plant applications that the NRC expects to receive during each calendar year. This catalog shows the applicant's name, project or docket number, reactor design type, dates on which the NRC received and accepted the application, proposed number of units, name and State of the proposed site location, whether the site currently has an operating unit, and the current status of the application. The information for future applications is based solely on letters of intent submitted by prospective applicants.

**NRC-Regulated Complex Materials Sites Undergoing Decommissioning**

A status summary for decommissioning of NRC-regulated complex materials sites in the United States. Available information includes site name, location, and State; current compliance criteria; whether the decommissioning plan (DP) has been submitted to the NRC and, if so, the original submission date; whether the NRC has approved the DP; and the estimated closure date. This information is current as of September 30, 2010, and summarizes the related information presented in the Status of the Decommissioning Program 2010 Annual Report

**Uranium Recovery Facility Application**

Information about the status of uranium recovery facility applications, reviews, and letters of intent (including expected applications, as well as applications currently under review). The available information includes the company name, site, location, design type, date of application and/or letter of intent, and current status.

**Fed, PCBA**

**Fed, PCB Notice of Activity** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 9/23/2020.)

The Toxic Substances Control Act (TSCA) became law on October 11, 1976. The Act authorized EPA to secure information on all new and existing chemical substances, as well as to control any of the substances that were determined to cause unreasonable risk to public health or the environment. The current PCB regulations were published pursuant to this act.

PCB handlers are required to Notify EPA of any PCB activity. The following types of operations are required to submit notification. PCB Activity database is a listing of those notifications.

Generator with onsite storage facility: User, owner, or processor of PCBs or PCB items and maintain a own storage facilities subject to 40 CFR 761.65(b) or (c)(7) for PCBsB.

Commercial Storer: A storage facility which is subject to the storage facility standards of 40 CFR 761.65(b) or (c)(7), and which engages in off-site storage activities involving the PCB wastes generated by others. Most commercial storers of PCB waste perform waste storage services in exchange for a fee or other compensation, but the receipt of compensation is not necessary for a storage facility to qualify as a commercial storer of PCB wastes generated by others. See definition of commercial storer in 40 CFR 761.3C.

Transporter: Move PCBs by air, rail, highway, or water

R&D/Treatability: Engaged in conducting R&D into PCB disposal technologies and cannot accept waste on a commercial scale

Approved Disposer: Hold a valid EPA permit to dispose of PCBs in concentrations exceeding 50 ppm in a landfill through alternative technology or incineration

Scrap Metal Recovery Oven/Smelter, High Efficiency Boilers: Operate a device to dispose of PCBs, or dispose of PCBs in compliance with Section 761.71 (i.e., high efficiency boilers) or Section 761.72 (i.e., scrap metal recovery oven/smelter)

**Fed, PCB CD****Fed, PCB Waste Handlers Comm Displ Permits NLU**

Polychlorinated Biphenyls or PCBs belong to a broad family of man-made organic chemicals known as chlorinated hydrocarbons. PCBs were domestically manufactured from 1929 until their manufacture was banned in 1979. They have a range of toxicity and vary in consistency from thin, light-colored liquids to yellow or black waxy solids. Due to their non-flammability, chemical stability, high boiling point, and electrical insulating properties, PCBs were used in hundreds of industrial and commercial applications including electrical, heat transfer, and hydraulic equipment; as plasticizers in paints, plastics, and rubber products; in pigments, dyes, and carbonless copy paper; and many other industrial applications.

Commercial Disposal Permits are disposal companies that have received EPA approvals to store and dispose of PCB wastes

Commercial Storage Permits are disposal companies that have received EPA approvals to store and dispose of PCB wastes.

**Fed, PCBR**

**Fed, PCB Registrations** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 1/16/2016.)

Companies or people who have PCB transformers must register them with the EPA using form 7720-12. EPA is providing the updated Transformer Registration Database showing Most Recent Registrations. This database indicates the best known current status of registered PCB transformers.

Polychlorinated Biphenyls or PCBs belong to a broad family of man-made organic chemicals known as chlorinated hydrocarbons. PCBs were domestically manufactured from 1929 until their manufacture was banned in 1979. They have a range of toxicity and vary in consistency from thin, light-colored liquids to yellow or black waxy solids. Due to their non-flammability, chemical stability, high boiling point, and electrical insulating properties, PCBs were used in hundreds of industrial and commercial applications including electrical, heat transfer, and hydraulic equipment; as plasticizers in paints, plastics, and rubber products; in pigments, dyes, and carbonless copy paper; and many other industrial applications.

**Fed, RCRA**

**Fed, RCRA Permits** (Agency Contact: 1/1/2021. Data Update: 1/7/2021.)

The Resource Conservation and Recovery Act (RCRA), enacted in 1976, is the principal federal law in the United States governing the disposal of solid waste and hazardous waste.

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

HSWA - the Federal Hazardous and Solid Waste Amendments - are the 1984 amendments to RCRA that focused on waste minimization and phasing out land disposal of hazardous waste as well as corrective action for releases. Some of the other

mandates of this law include increased enforcement authority for EPA, more stringent hazardous waste management standards, and a comprehensive underground storage tank program

#### Subtitle D - Solid Waste

Non-hazardous solid waste is regulated under Subtitle D of RCRA. Regulations established under Subtitle D ban open dumping of waste and set minimum federal criteria for the operation of municipal waste and industrial waste landfills, including design criteria, location restrictions, financial assurance, corrective action (cleanup), and closure requirement. States play a lead role in implementing these regulations and may set more stringent requirements. In absence of an approved state program, the federal requirements must be met by waste facilities.

#### Subtitle C - Hazardous Waste

Hazardous waste is regulated under Subtitle C of RCRA. EPA has developed a comprehensive program to ensure that hazardous waste is managed safely from the moment it is generated to its final disposal (cradle-to-grave). Under Subtitle C, EPA may authorize states to implement key provisions of hazardous waste requirements in lieu of the federal government. If a state program does not exist, EPA directly implements the hazardous waste requirements in that state. Subtitle C regulations set criteria for hazardous waste generators, transporters, and treatment, storage and disposal facilities. This includes permitting requirements, enforcement and corrective action or cleanup.

#### [Fed, RIEC](#)

**Fed, RCRA Institutional/Engineering Controls** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

The Institutional and Engineering Controls Summary provides a listing of all RCRA hazardous waste permit sites with Institutional and/or Engineering Controls in place. Institutional Controls (IC) are defined as non-engineered and/or legal controls that minimize the potential human exposure to contamination by limiting land or resource use. Whereas, Engineering Controls (EC) consist of engineering measures (e.g. caps, treatment systems, etc.) designed to minimize the potential for human exposure to contamination by either limiting direct contact with contaminated areas or controlling migration of contaminants through environmental media,

#### [Fed, RV](#)

**Fed, RCRA Violators** (Agency Contact: 1/1/2021. Data Update: 1/7/2021.)

The effective implementation of the RCRA program depends on whether the people and companies regulated under RCRA comply with its various requirements. The goals of the RCRA enforcement program are to ensure that the regulatory and statutory provisions of RCRA are met, and to compel necessary action to correct violations. EPA and the states achieve these goals by closely monitoring hazardous waste handler (e.g., generator, transporter, and treatment, storage, and disposal facility (TSDF)) activities, taking expeditious legal action when noncompliance is detected, and providing compliance incentives and assistance. Facility inspections by federal and state officials are the primary tool for monitoring compliance. When noncompliance is detected, legal action, in the form of an administrative order, a civil lawsuit, or a criminal lawsuit, may follow, depending on the nature and severity of the problem. EPA has also issued several policies to provide incentives for businesses to voluntarily evaluate their own compliance and disclose violations, and to assist small businesses in complying with the regulations. The combination of effective monitoring, expeditious legal action, and compliance incentives and assistance is intended to reduce the number of facilities operating in violation of RCRA requirements and to deter potential violations.

#### [Fed, SEMS](#)

**Fed, SEMS CERCLA** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

The CERCLIS Public Access Database, which contained a selected set of publicly releasable Superfund program data, has been retired. The EPA is transitioning to the Superfund Enterprise Management System, or SEMS. SEMS includes the same data fields and content as CERCLIS.

The Comprehensive Environmental Response, Compensation, and Liability Act -- otherwise known as CERCLA or Superfund -- provides a Federal "Superfund" to clean up uncontrolled or abandoned hazardous-waste sites as well as accidents, spills, and other emergency releases of pollutants and contaminants into the environment. Through CERCLA, EPA was given power to seek out those parties responsible for any release and assure their cooperation in the cleanup.

On June 13, 1979, President Carter proposed legislation to Congress which would establish a multi-million dollar fund to help clean up hazardous waste dump sites which threaten public health or the environment. The Administration also requested FY 1980 supplemental appropriations for the Environmental Protection Agency and Department of Justice to investigate and enforce hazardous waste problems.

This supplemental request included \$45 million and 70 positions for EPA, and \$1.2 million and 30 positions for Justice. Of the \$45 million, \$22 would be used for investigating hazardous waste sites and \$23 would be used to prevent or contain contamination from waste sites pending Congressional passage of the proposed cleanup fund. The Justice Department appropriation and positions would be used to help conduct investigations and to initiate court actions against illegal dumping or

spilling of wastes.

This law created a tax on the chemical and petroleum industries and provided broad Federal authority to respond directly to releases or threatened releases of hazardous substances that may endanger public health or the environment. Over five years, \$1.6 billion was collected and the tax went to a trust fund for cleaning up abandoned or uncontrolled hazardous waste sites

EPA cleans up orphan sites when potentially responsible parties cannot be identified or located, or when they fail to act. Through various enforcement tools, EPA obtains private party cleanup through orders, consent decrees, and other small party settlements. EPA also recovers costs from financially viable individuals and companies once a response action has been completed.

EPA is authorized to implement the Act in all 50 states and U.S. territories. Superfund site identification, monitoring, and response activities in states are coordinated through the state environmental protection or waste management agencies.

The law authorizes two kinds of response actions:

Short-term removals, where actions may be taken to address releases or threatened releases requiring prompt response.

Long-term remedial response actions, that permanently and significantly reduce the dangers associated with releases or threats of releases of hazardous substances that are serious, but not immediately life threatening. These actions can be conducted only at sites listed on EPA's National Priorities List (NPL).

The Superfund Amendments and Reauthorization Act (SARA) of 1986 reauthorized CERCLA to continue cleanup activities around the country. Several site-specific amendments, definitions clarifications, and technical requirements were added to the legislation, including additional enforcement authorities. Also, Title III of SARA authorized the Emergency Planning and Community Right-to-Know Act (EPCRA).

**Fed, TCI**

**Fed, TSCA CDR-IUR** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 11/9/2020.)

The purpose of Chemical Data Reporting (CDR), formerly known as Inventory Update Reporting (IUR), is to collect quality screening-level, exposure-related information on chemical substances and to make that information available for use by EPA and, to the extent possible, to the public. The IUR/CDR data are used to support risk screening, assessment, priority setting and management activities and constitute the most comprehensive source of basic screening-level, exposure-related information on chemicals available to EPA.

In 1977, the EPA promulgated a rule under the Toxic Substances Control Act (TSCA) section 8(a), 15 U.S.C. 2607(a), to compile and keep current an inventory of chemical substances in commerce in the U.S. This inventory is called the TSCA Chemical Substance Inventory (TSCA Inventory).

The 1986 regulation required chemical manufacturers (including importers) to report to EPA every 4 years the identity of and basic manufacturing information for organic chemical substances manufactured (including imported) in quantities of 10,000 pounds or greater annually at each plant site they own or control.

In 2003 and again in 2005, EPA amended the IUR, expanding the range of chemicals and plant sites reporting, expanding the type of data reported, raising the production volume threshold that triggers reporting, and making certain further adjustments. Beginning with the 2006 IUR requirements, every five years beginning in 2006, manufacturers and importers producing 25,000 pounds or more of a reportable chemical substance reported the identity of the chemical substance and basic manufacturing information. Additionally, manufacturers and importers producing 300,000 pounds or more had to report basic domestic processing and use information.

On August 2, 2011, EPA issued a final Chemical Data Reporting (CDR) Rule which was proposed as the Inventory Update Reporting (IUR) Modifications Rule. The final CDR rule returns the frequency of reporting to once every four years and also began requiring electronic submission of CDR data over the internet using the e-CDRweb reporting tool; Modified reporting thresholds; Updated definitions; Revised industrial classifications; Modified situations in which confidentiality may be claimed.

**Fed, TPP**

**Fed, TSCA PPIS** (Agency Contact: 1/1/2021. Data Update: 1/7/2021.)

EPA and the states (usually that state's agriculture office) register or license pesticides for use in the United States. EPA receives its authority to register pesticides under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). States are authorized to

regulate pesticides under FIFRA and under state pesticide laws. States may place more restrictive requirements on pesticides than EPA. Pesticides must be registered both by EPA and the state before distribution. EPA also regulates pesticides imported for use in the U.S. and participates in a wide variety of international activities, such as regulatory agreements and coordination activities.

The Pesticide Product Information System (PPIS) contains information concerning all pesticide products registered in the United States. It includes registrant name and address, chemical ingredients, toxicity category, product names, distributor brand names, site/pest uses, pesticidal type, formulation code, and registration status.

#### Fed, TRI

**Fed, Toxic Release Inventory** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 8/17/2020.)

TRI tracks the management of certain toxic chemicals that may pose a threat to human health and the environment. U.S. facilities in different industry sectors must report annually how much of each chemical is released to the environment and/or managed through recycling, energy recovery and treatment. (A "release" of a chemical means that it is emitted to the air or water, or placed in some type of land disposal.)

The information submitted by facilities is compiled in the Toxics Release Inventory. TRI helps support informed decision-making by industry, government, non-governmental organizations and the public.

The TRI Program was created in response to several events that raised public concern about local preparedness for chemical emergencies and the availability of information on hazardous substances.

In 1986, Congress passed the Emergency Planning and Community Right-to-Know Act (EPCRA) to support and promote emergency planning and to provide the public with information about releases of toxic chemicals in their community. Section 313 of EPCRA established the Toxics Release Inventory.

#### Fed, UMTRA

**Fed, Uranium Mill Tailing Remedial Action** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 3/21/2020.)

EPA has compiled mine location information from federal, state, and Tribal agencies into a single database as part of its investigation into the potential environmental hazards of wastes from abandoned uranium mines in the western United States.

#### IC, AFS

**Fed, Indian Country AFS** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

The US EPA regulates Air Facility System permits and compliance within Indian Country.

Indian Country is defined as All land within the limits of any Indian reservation under the jurisdiction of the United States government, notwithstanding the issuance of any patent, and including rights-of-way running through the reservation; All dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a State; and All Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same. The Air Facility System (AFS) contains compliance and permit data for stationary sources regulated by EPA, state and local air pollution agencies. The environmental regulatory community uses this information to track the compliance status of point sources with various programs regulated under the Clean Air Act.

Compliance data in AFS are maintained at two levels: plant and point. Plant-level compliance data track the compliance and classification status of the plant, inspections, and other compliance actions taken against the plant. Similar data also can be tracked at the point level.

AFS also includes data for management of facility operating permits. Current capability consists of tracking the steps in the permit issuance process. State and local air agencies report to AFS when they issue a Federal operating permit (a permit issued in accordance with Title V of the Clean Air Act of 1990).

The Operating Permits Program provides a mechanism for gathering together in one document all of the federal, State and local requirements applicable to air pollution sources.

AFS became operational in April, 1990. AFS replaced the National Emissions Data System (NEDS), the Hazardous and Trace Emissions System (HATREMS), and the Emissions Inventory System (EIS) for emission point source data reporting. The Compliance Data System (CDS), previously used by EPA and the states for compliance and emission point source data reporting, and the Continuous Emissions Monitoring Subset (CEMS), used for the maintenance of point continuous emission monitoring data, were also replaced by AFS.

#### IC, FE&C

**Fed, Indian Country FE&C** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

The Integrated Compliance Information System (ICIS) tracks all formal administrative and judicial enforcement actions taken by the U.S. EPA and is used as the system of record to provide official enforcement data. Additionally, state formal CWA administrative and judicial enforcement actions for those States using ICIS-NPDES are also tracked by ICIS FE&C.

EPA tracks formal administrative and judicial enforcement actions taken by the US EPA in all Indian Country, and works closely with Tribal water quality programs to educate the regulated community about these requirements.

#### IC, LUST

**Fed, Indian Country LUST** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 9/12/2019.)

Indian Country (as Defined in 40 CFR 71.2) is:

All land within the limits of any Indian reservation under the jurisdiction of the United States government, notwithstanding the [service@veracheck.com](mailto:service@veracheck.com)

issuance of any patent, and including rights-of-way running through the reservation;  
 All dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a State; and  
 All Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same.  
 This definition parallels the definition of Indian country contained in 18 U.S.C. section 1151 and has been applied extensively by the federal courts.  
 EPA's Office of Underground Storage Tanks, in partnership with EPA's regional offices, implements the underground storage tanks (UST) program in Indian country. We provide technical and financial support to tribal governments to prevent and cleanup petroleum releases from USTs.

**IC, NPDES**

**Fed, Indian Country NPDES** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 10/7/2020.)

To prevent pollutants in storm runoff from entering surface waters, the federal Clean Water Act requires that stormwater discharges from construction, industrial and municipal sources obtain NPDES permit coverage.

EPA issues NPDES permits in all Indian Country, and works closely with Tribal water quality programs to educate the regulated community about these requirements.

**IC, UST**

**Fed, Indian Country UST** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 9/12/2019.)

The purpose of the Regional Tribal Operations Committee is to advance the protection and improve the conditions of tribal health and the environment in Indian country. The vision of the Underground Storage Tank Branch (USTB) is: To provide and continuously improve leadership and support to the states, municipalities, Indian Tribes, tank owners, and citizen for the protection of human health and the environment. This will be accomplished through identification, management, and oversight of underground storage tank (UST) facility life cycles including installation, operation, closure, and remediation. EPA is the enforcement authority for UST compliance in Indian Country. Compliance assistance to Indian Country facilities has always been a high priority for the tank program.

**PA, AMLI**

**PA, Abandoned Mine Lands Inventory** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

This data set portrays the approximate location of Abandoned Mine Land Problem Areas containing public health, safety, and public welfare problems created by past coal mining. It is a subset of data contained in the Office of Surface Mining (OSM) Abandoned Mine Land Inventory. This layer represents the AML Inventory Sites, which are the boundary of an entire problem area. All related AML point/polygon features must fit within the boundary of the designated problem area.

**PA, AMLP**

**PA, Abandoned Mine Land Points** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

This data set portrays the approximate location of Abandoned Mine Land Problem Areas containing public health, safety, and public welfare problems created by past coal mining. It is a subset of data contained in the Office of Surface Mining (OSM) Abandoned Mine Land Inventory. This layer identifies AML Points representing specific locations within an AML Inventory Site, examples include AML discharge.

**PA, AMLPG**

**PA, Abandoned Mine Land Polygons** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

This data set portrays the approximate location of Abandoned Mine Land Problem Areas containing public health, safety, and public welfare problems created by past coal mining. It is a subset of data contained in the Office of Surface Mining (OSM) Abandoned Mine Land Inventory. This layer identifies AML Polygons representing specific areas to large to be represented by points within the entire AML Inventory Site, examples include AML dangerous highwalls.

**PA, AST**

**PA, Above Ground Storage Tanks** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

An Above Ground Storage Tank (AST) is a system consisting of a tank or combination of tanks, and the piping and ancillary equipment connected to it within its containment structure. Systems containing more than very small quantities of regulated substances (PDF) where the system volume is greater than 250 gallons and where 10 percent or less of the system volume is underground are regulated in Pennsylvania by the Storage Tank Program unless one of the exemptions apply.

**PA, AUL**

**PA, Activity Use Limitations** (Agency Contact: 1/1/2021. Data Update: No update provided by agency. Report is based on data from 10/24/2020.)

On Dec. 18, 2007, Act 68, the Uniform Environmental Covenants Act (UECA) (PDF), was signed into law. Act 68 provides a standardized process for creating, documenting and assuring the enforceability of activity and use limitations on contaminated sites. Under UECA an environmental covenant will be required whenever an engineering or institutional control is used to demonstrate the attainment of an Act 2 remediation standard for any cleanup conducted under an applicable Pennsylvania environmental law.

DEP is obligated under UECA to maintain a registry for the public display of covenants received. To meet that requirement, DEP

has developed the Pennsylvania Activity and Use Limitations (PA AUL) Registry.

[PA, AUM](#)

**PA, Active Underground Mines** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

Pennsylvania state law requires those who wish to conduct mining activities within the Commonwealth submit and get approval by the Pennsylvania Department of Environmental Protection (DEP) for permits related to those activities. These permits are written to cover various aspects of the mining operations, such as: reclamation, water quality protection, air quality protection, waste disposal and mine subsidence control. The DEP California District Office reviews permits related to Bituminous coal underground mining. Module 6.1 of the Application for Bituminous Underground Mine requires a Location Map be submitted with the permit. The Location Map should be a 7.5 Minute USGS map covering the area within one (1) mile of the underground permit area boundaries. This dataset contains the digitized underground permit area boundaries of the active underground bituminous mines in Pennsylvania based from the Location Maps submitted with the permit applications and permit renewal applications.

[PA, DCCDL](#)

**PA, Dry Cleaners City Directory Listings** (Agency Contact: Varied-Historical. Data Update: 9/20/2020.)

Listings of dry cleaners derived from city directory research. This research is primarily intended to identify current and historical (through 1994) dry cleaner locations however; some listings might not be related to retail dry cleaning facilities.

[PA, EC](#)

**PA, Historical Engineering Controls**

This data set contains information related to Engineering Controls placed on sites before 2008. After 2008, the data was transferred to the Land Recycling Program database.

Under the Land Recycling Act (Act 2) persons who perform a site cleanup using the site-specific standard or the special industrial area standard may use engineering or institutional controls as part of the response action.

Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

[PA, GSCDL](#)

**PA, Gas Stations City Directory Listings** (Agency Contact: Varied-Historical. Data Update: 9/20/2020.)

Listing of gas stations derived from city directory research. This research is primarily intended to identify current and historical (through 1994) gas station locations however; some listings might not be related to retail fuel facilities.

[PA, HSRA](#)

**PA, Hazardous Site Cleanup Act** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

This list represents hazardous sites response actions that have been taken since the enactment of the Hazardous Sites Cleanup Act (HSCA) on October 18, 1988. The HSCA provides the Pennsylvania Department for Environmental Protection for the cleanup of hazardous waste sites, response and investigations, liability and cost recovery, establishing the HSCA fund, for certain fees and for enforcement remedies and penalties.

The information in this list is derived from DEP's Environment, Facility, Application and Compliance Tracking System (eFACTS). The purpose of providing this listing is not to identify problem areas, rather to identify the status of all response actions that have been taken utilizing HSCA funding.

[PA, HW](#)

**PA, Hazardous Waste Permits** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

Commercial Hazardous Waste Facilities include facilities that dispose, treat, or store garbage, refuse or sludge from an industrial or other wastewater treatment plant, sludge from a water supply treatment plant or air pollution control facility, and other discarded material, including solid, liquid, semisolid or contained gaseous material resulting from municipal, commercial, industrial, institutional, mining or agricultural operations, and from community activities, or a combination of these materials, which because of its quantity, concentration or physical, chemical or infectious characteristics may pose a substantial present or potential hazard to human health or the environment.

A Captive Hazardous Waste Operation is a DEP primary waste processing or disposal facility that is located upon lands owned by the person or municipality that generated the residual waste and which is operated to provide for the processing or disposal solely of the generator's residual waste.

[PA, IC](#)

**PA, Historical Institutional Controls**

This data set contains information related to Institutional Controls placed on sites before 2008. After 2008, the data was transferred to the Land Recycling Program database.

Under the Land Recycling Act (Act 2) persons who perform a site cleanup using the site-specific standard or the special industrial area standard may use engineering or institutional controls as part of the response action.

Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

**PA, LAST**

**PA, Leaking Aboveground Storage Tanks** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

This list represents confirmed release incidents that have been reported to DEP since the enactment of the Storage Tank and Spill Prevention Act (Tank Act) in July 1989. These release incidents represent leaks, spills and overfills which have occurred from storage tank systems regulated by the Tank Act only. Releases from home heating oil tanks, which are not regulated by the Tank Act, are not part of this list. The purpose of this list is to provide information on the cleanup status of all known release incidents which have occurred from regulated storage tank systems in Pennsylvania. The information in this list is derived from DEP's eFACTS (Environment, Facility, Application, Compliance Tracking System).

**PA, LRP**

**PA, Land Recycling Program** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

Land Recycling Cleanup Location Land Recycling Cleanup Locations (LRCL) are divided into one or more sub-facilities categorized as media:

Air, Contained Release or Abandoned Container, Groundwater, Sediment, Soil, Surface Water, and Waste. Media is the environmental resource that is associated with the cleanup effort. The following primary facility kinds describe the Acts from which cleanup locations are derived:

**Act2 Land Recycling and Environmental Remediation Standards** The first declaration of Section 102 of the policy provides a brief description of the purpose of Act2: The elimination of public health and environmental hazards on existing commercial and industrial land across this Commonwealth is vital to their use and reuse as sources of employment, housing, recreation, and open-space areas. The reuse of industrial land is an important component of a sound land use policy that will help prevent the needless development of prime farmland, open-space areas and natural areas and reduce public costs for installing new water, sewer, and highway infrastructure.

**CERCLA Comprehensive Environmental Response, Compensation, and Liability Act**, also known as the Superfund This act was passed by Congress as a federal law in December of 1980, creating a tax on chemical and petroleum industries to: Identify and respond to sites from which releases of hazardous substances into the environment have occurred or could potentially occur Ensure they are cleaned up by responsible parties or through government funding Evaluate damages to natural resources

**HSCA Hazardous Sites Cleanup Act** [This Act] provides the Department of Environmental Protection (DEP) with the funding and the authority to conduct cleanup actions at sites where hazardous substances have been released. HSCA also provides DEP with enforcement authorities to force the persons who are responsible for releases of hazardous substances to conduct cleanup actions or to repay public funds spent on a DEP funded cleanup action. HSCA funds are also used to pay the state share of costs of cleanup actions at Pennsylvania sites in the Federal Superfund program. Under the provisions of HSCA, most HSCA sites involve bankrupt facility owners, abandoned facilities, and inappropriate disposal of hazardous substances. As a general rule, HSCA sites do not include active facilities with financially viable owners.

**Other** The Other primary facility kind includes a mixture of various different cleanup sites, no further action sites, and potential sites. This is optional data that the regional offices are not required to maintain.

**STSP Storage Tank Spill and Prevention Act** Releases and/or ruptures from improperly installed or faulty storage tanks contaminate the Commonwealth's land and water resources. This act was passed to prevent such contamination through "improved safeguards on the installation and construction of storage tanks."

**PA, LUST**

**PA, Leaking Underground Storage Tanks** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

This list represents confirmed release incidents that have been reported to DEP since the enactment of the Storage Tank and Spill Prevention Act (Tank Act) in July 1989. These release incidents represent leaks, spills and overfills which have occurred from storage tank systems regulated by the Tank Act only. Releases from home heating oil tanks, which are not regulated by the Tank Act, are not part of this list. The purpose of this list is to provide information on the cleanup status of all known release incidents which have occurred from regulated storage tank systems in Pennsylvania. The information in this list is derived from DEP's eFACTS (Environment, Facility, Application, Compliance Tracking System).

**PA, MO**

**PA, Mining Operations** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

Pennsylvania state law requires those who wish to conduct mining activities within the Commonwealth submit and get approval by the Pennsylvania Department of Environmental Protection (DEP) for permits related to those activities. These permits are written to cover various aspects of the mining operations, such as: reclamation, water quality protection, air quality protection, waste disposal and mine subsidence control.

An Industrial Mineral Mining Operation is a DEP primary facility type related to the Industrial Mineral Mining Program.

A Coal Mining Operation is a DEP primary facility type related to the Coal Mining Program.

**PA, SW**

**PA, Solid Waste** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

A Municipal Waste Operation is a DEP primary facility type related to the Waste Management Municipal Waste Program. The sub-facility types related to Municipal Waste Operations that are included are: \_

**Composting:** Includes facilities that use land for processing municipal waste by composting. Composting is a process that biologically decomposes organic waste under controlled anaerobic or aerobic conditions to yield a humus-like product. **Land Application:** Includes facilities that uses agricultural utilization or land reclamation waste. Sewage sludge is land-applied for its nutrient value or as a soil conditioner.

**Landfill - Abandoned:** The Abandoned Landfill Inventory Project collects geospatial and descriptive data for closed and abandoned landfills throughout the state of Pennsylvania. Locations for sites were determined from historic records such as microfiche, index card, topographic map, and staff personal files, and then compiled into site lists. Each of the six DEP regions is staffed with summer interns who physically locate the sites and collect the data for the project. The purpose of the Abandoned Landfill Inventory Project is to determine the location of abandoned and closed landfills in order to catalog potential environmental hazards. The data is intended for internal government and public consumption, in order to keep property sales, clean-up efforts, and land development well informed. **Landfill:** A landfill is a facility that uses land for the disposal of municipal waste.

**Processing Facility:** A processing facility is a transfer station, composting facility, resource recovery facility, or a facility that reduces the volume or bulk of municipal waste for offsite reuse.

**Resource Recovery:** A resource recovery is a facility that provides for the extraction and utilization of materials or energy from municipal waste. The facility can be a mechanical extraction facility or a combustion facility.

**Transfer Station:** A transfer station is a facility that receives and processes or temporarily stores municipal waste at a location other than the generation site. This sub-facility facilitates the transportation or transfer of municipal waste to a processing or disposal facility.

**PA, UST**

**PA, Underground Storage Tanks** (Agency Contact: 1/1/2021. Data Update: 1/5/2021.)

In accordance with the Department of Environmental Protection's mission, the Storage Tank Program will protect Pennsylvania's air, land and water from storage tank releases and provide for the health and safety of its citizens. Systems that will be used to contain, have contained or currently contain products with more than a very small concentration of regulated substances, where the system volume is greater than 110 gallons and where at least 10 percent of the UST volume is beneath the surface of the ground are regulated in Pennsylvania by the Storage Tank Program as a UST.

An Underground Storage Tank must be registered, by the owner, with the department and an annual registration fee paid. A valid operating permit is required before it is operated. The department routinely withholds the operating permit of tanks that have been emptied and taken out of service. Where significant violations of the rules exist DEP may suspend or revoke an operating permit until the system is brought into compliance.
