Any evidence of malfunction? ☐ Yes ☒ No (Please check all applicable observed conditions)

☐ Wet Areas

☐ Liquid discharges to surface

☐ Localized surface settlements

☐ Other (Describe below)

Based on a visual evaluation only - Is system working properly? ☒ Yes ☐ No

Additional Comments/Repair needed: _____

Septic systems are subterranean; therefore, it is impossible to determine their overall condition. Also, when no water is entering the hold lines, i.e., if the house is vacant, a determination of their status is difficult. No prediction can be made as to when or if a system might fail. This report comments on the workability of the system on the day of the inspection only, and is in no way intended to be a warranty. Workability can be altered by factors such as excessive rainfall, heavy water usage, faulty plumbing, neglect or physical damage to the system. All tanks require pumping maintenance every 3 to 5 years.

The condition of the system is adequate and should support a normal level of septic activity unless noted above. RYLANDER X.P. INC. will not be responsible for failures of the system in the future.
