LandScape Segment Descriptions

Sublime Suburbia (I5)

Incomes go farther when there are no children to clothe, house, educate, and entertain. For a glimpse of suburban lifestyles with predominately married 30- year- olds, earning \$50,000s and \$60,000s, and with no children to support, take a drive through Sublime Suburbia segments. You're likely to find very comfortable homes on average size lots, because residents in these areas are able to maintain a solid average level of the American dreamscape by working hard and investing moderately. These segments are the most average in the Married in the Suburbs category - including average rankings in married- households, college educations, and employment in jobs such as management, food preparation, personal care, sales, office administration, and the repair industry. This group is also earning a slightly above- average level of investment income, which speaks to their comfortable lifestyle. They also show a slightly above- average level of retirement income, which indicates a patchwork of 65- plus residents among the "youngsters."

Couples with Capital (I3)

When people think of suburbs, they invariably think of kids, bicycles, ice cream trucks, and baseball games. But Couples & Capital neighborhoods defy this stereotypical suburb scenario - simply because they are home to a below- the- national- average level of children. Since these areas also rank below- average in single residences, what you'll find if you knock on most doors are white- collar working couples. Most likely, the doors on which you knock are located in some pretty impressive homes - because people in these areas earn annual incomes of \$70,000s and \$80,000s. Since residents of these Married in the Suburbs segments aren't spending their money on children, it's logical to assume their spending it on nice homes, nice vacations, and other luxuries. However, since these 30- somethings are relatively young, the possibility of adding children to their homes is alive and well. But for now they'll continue to spend their days driving to their white- collar management and professional jobs - instead of to soccer games. And they'll continue looking for the wise investments that have them ranking well- above- average in interest/dividend income.

Regents (A6)

Regents are highly urban Creme de la Creme neighborhoods with the vast majority of their residents in their 40s, fewer- than- average children under 17 years old, and a higher- than- average number of 65- plus- year- olds. Though they have fewer children, the residents in these areas have a higher- than- national- average quota of married couples. Also higher- than- average are the number of college- educated residents, people employed in white- collar management and professional positions, and income from retirement investments/social security. The combination of income avenues, put these neighborhoods solidly in the \$70,000s to \$80,000s median annual income range - making their "middle- age" years extremely financially secure and materially comfortable.

Gurus (E1)

Gurus may very well be among the leaders of the going- it- alone- and- loving- it phenomenon that has emerged in America's urban areas over the past few decades. After all, they are the elder statesmen (and women) among the three Thriving Alone segments. Gurus median age is in the 40s, but they are also home to nearly twice- the- national- average of 65- plus residents. Therefore, quite logically, these areas are home to the trailblazers for younger generations of happy singles. Gurus tend to be single widows and widowers, but a higher- than- average number have also never been married. If Gurus did help to make this lifestyle attractive, there are good reasons why: Their median income is in the more- than- comfortable \$50,000s and \$60,000s, they are college educated, and they have white- collar careers predominantly in management professions. What's more, even with a large number of 65- plus residents, Gurus segments are not pulling a correlatively high level of income from retirement/social security. This could mean they like their jobs and so are continuing to work into traditional "retirement" years. However, they are earning an above- average level of income from interest/dividends, which makes them smart investors as well as dependent- free consumers.

Solo Acts (F3)

Solo Acts are urban neighborhoods with relatively young single populations, but with an over- 50- percent- higher- than- average number of divorced residents. These 20- and 30- year- olds also have more children than other Going it Alone segments. Some of these residents are single due to the death of a spouse and because they've never been married. Whatever the reason, the households tend to be single females or males with some kids to take care of. With only a little college education and incomes in the \$30,000s and \$40,000s, it's not difficult to imagine this group struggling to make ends meet. They may, in fact, rely on family members and friends for a Friday night supper or weekend splurge at a theme park to ease their struggle - all the while keeping their calendars clear for any dating opportunities (to turn their single status into more comfortable couplehood). Incomes for this population are generated from a variety of white- collar jobs in food preparation, maintenance, healthcare, office administration, and personal care. They register a slight up- tick on the public assistance income measurement, which helps supplement their single- income households.

Kindred Spirit (B3)

Kindred Spirits are home to people who keep America humming - because they are the ones doing the work, as well as their fair share of the spending. The residents of these Urban Cliff Climber neighborhoods are 20- to 30- years- old, married- with- children of all ages (but slightly more in the younger ranges), earning between \$40,000 and \$50,000, enjoying some years of college education, and employed in a cross- section of the nation's middle- class occupations. These residents earn an income slightly above the national- average in a wide range of jobs, such as protective services, food preparation, personal care, sales, office administration, construction, and repair services. With kids to raise and relatively good incomes, Kindred Spirits no doubt enjoy a big slice of classic middle- class life.

Collegians (O7)

According to the U.S. Dept. of Labor's Bureau of Labor Statistics, in October 2004, 66.7% of high- school graduates from the class of 2004 were enrolled in colleges or universities across the United States. This is obviously a huge annual boon to retailers who sell the staples of college life, including low- cost dorm- style furniture, pens and notebooks, and inexpensive home furnishings. Collegians areas are home to currently enrolled college students living in either dorms or off campus areas dedicated to college students. Market researchers will find a very homogenous group of young adults within these unique areas. Collegians are home to residents sharing a median- age- range in the 20s and low- 30s. They are predominately not married, and have no children. Naturally, they all have high- school degrees. For those students who are working to help pay the ever- increasing cost of higher education, they are employed a mix of white- and blue- collar occupations, such as protective services (over- two- times- average), personal care (nearly two- times- average), and management and sales (nearly 50- percent- above- average). Through these jobs they generate annual incomes at the low- \$30,000s- or- less range. Residents in these areas generate almost no public- assistance income.

Legacy Years (O6)

There are two images of that come to mind when you say "senior citizen" in the United States. One is of a very well off retired person living out their golden years in comfort. A second image is of an older person who is struggling to make ends meet and suffering the indignities of a combination of old- age and low- income. Legacy Years are areas representing households that are fully retired with residents on very tight budgets. The median age in these neighborhoods is the 50s and low- 60s, but they also have a nearly three- times- the- national- average number of people over 65- years- old. The median income of these households is the low- \$30,000s or less. While many residents are drawing on social security and retirement income, they also have a 75- percent- above- average ranking in public- assistance. This group of senior citizens also ranks above- average on several occupational categories, which is either a reflection of the employment of the younger members of the neighborhood or the need for some seniors to continue working. They show above- average levels of employment in both blue- and white- collar jobs in these areas: healthcare support, building maintenance, farming/fishing/forestry, protective services, and food preparation. An above- average percent have high- school degrees, but a higher percent have less- than- high- school educations. These areas have an average level of married- couples and few children, but above- average levels of single- households (over 50- percent- above- average), widows (well over two- times- average), and widowers (over two- and- a- half- times- average).

Centurions (O5)

It would come as no surprise to most people that military personnel living across the country have their own unique demographics and lifestyle segmentation characteristics from non-military people. Just one example of this, and reason for this fact, is that this population tends to retire at a considerably younger age than workers in civilian sectors. Among the explanations for this pattern is that many military tasks require the physical stamina of youth. Market segmentation bears out this fact, as the population of Centurions segments are in their 20s and low-30s. Centurions neighborhoods are classified as highly urban areas with households dominated by military personnel. Other commonalities of the residents include salary ranges in the high-\$30,000s and the \$40,000s, and a two-times-the-national-average percentage of married-couple-with-children households. Their income is generated largely from salaries; and this segment has a very low level of income from public-assistance. No doubt owing to their younger age, there is a significantly above-average level of children under six-years-old. This group also has a nearly two-times-the-average number of people with some years of college under their military belts. Their occupational ranking is a mix of white-collar and blue-collar jobs in areas such as healthcare support, protective services, personal care, and farming.

Doublewides (O4)

In America there tends to be a particular stigma attached to living in mobile homes and mobile home parks, but in fact, many people chose this lifestyle as a preference for several reasons, including mobility and low-cost housing. In fact, the median income of residents of Doublewides neighborhoods is a very respectable high-\$30,000s and \$40,000s. Doublewides are areas where mobile homes dictate the lifestyles of the residents, who share a median age in the 30s. While residents in Doublewides do have a higher-than-average level of income from public-assistance, many others are hardworking Americans, with a higher-than-average representation in several manual-labor blue-collar occupations, including farming/fishing/forestry (nearly three-times-average), construction (75% above average), repair services (50% above average), transportation (50% above average), and production (nearly 50% above average). These occupations are a reflection of the residents' low educational achievements: There is an over-50% average number of people with less-than-high-school educations. However, 25% above average have high-school degrees. Also owing to their residents' ages, these areas have slightly more younger children than older. They tend to have married-couple households, but also have a nearly 50% higher-than-average number of single-fathers.

Group Quarters (O3)

Group Quarters is the name of the neighborhoods identified as home to people living predominately in apartments or other group housing quarters. The residents of multifamily rental housing are different from both homeowners and single-family home renters. It's logical to imagine this group being much more transient than home-owning citizens, and not investing as much in their home purchases. Apartment renters account for 15% of all U.S. households by a narrow definition that restricts the count to residence in structures with at least five apartments. A broader definition of two to four apartments per quarters increases this percentage to 22%. Among the shared demographics of the highly urban Group Quarters residents are a median-age in the 30s, very few children, more singles than married-couples, and a two-times-the-national-average level of people with less-than-high-school educations. Income for these rental-housing residents ranks 50-percent-higher-than-average on public-assistance. However, many of the residents are employed in blue-collar jobs, such as farming/fishing/forestry (nearly four-times-average), protective services (nearly two-and-a-half-times-average), and healthcare support, building maintenance, and transportation (all about 25-percent-above-average). Incomes are in the high-\$30,000s and \$40,000s ranges.

East Meets West (O2)

When most Americans think of people from the "East" then tend to think of Asians. And while many Asians moved to the United States in the past century, immigration trends of recent decades have brought many other citizens of other Eastern countries to the U.S shores. You'll find many of them living together in East Meets West neighborhoods, which are areas comprised mainly of Asians, but also contain other groups for whom English or Spanish is not the primary language spoken at home. Among the shared demographics of these areas are a very interesting correlation to "national-average" measurements - which, interestingly, points to the fact that these groups of people have done a great job of assimilating into America culture. They rank at near-average levels in married-couple-with-children household compositions, and have averages standings in all age ranges for kids. Some differences-from-the-average include: over 25-percent-average number of people with less-than-high-school educations, nearly 25-percent-average number of single-males-without-children, and nearly two-times-average level of public-assistance income. However, the median income range for East Meets West is quite high at \$50,000s and \$60,000s, which speaks to the fact that many residents are hard-working citizens. They show average levels of employment in a wide range of occupational categories, where they hold both blue- and white-collar jobs.
