The person we hired to do our leach field septic set up is Robert Resa of Heart of Texas Septic in Lampasas, Contact: 254-458-9790

He built out our septic with enough space for us to use the large tank for multiple mini buildings out on the property. If we decided to add a bigger house or further away we can easily tie into the main tanks because he put a split tube at the entrance of the tank setup knowing we were planning to add more. We can easily add more leach field strips too if needed. But the main tanks were the most expensive and the size will hold way more than the set up today. We have the tanks marked and we can show you where they are.

If you have more questions other than the septic report, please contact Robert Resa. I'm certain he can help!

The attached septic permit is the only thing I have from him.
