Hi Chris

The facility is listed as Active in the MiWaters account and I have asked WRD Administrators to unlock it so we can update to Closed. The wastewater discharge and on site management of sludge residuals has not created a Part 201 facility above soil cleanup criteria and does not indicate impact to groundwater or surface water quality above water quality standards. Thanks, Randy

Good morning Randy,

I spoke with those involved with OCF and they would like an email from EGLE stating the site is closed. Is that something you can provide?

Let me know if you have any questions.

Thanks,
Chris
