DESCRIPTION OF WORK

Provided a full inspection of the Navien Tankless Water heater in the Attic, as it appeared to have issues due to inclement weather. Found the PVC drain line to be cracked & broken in several different places & Found the TTP release broken as well. Removed all damaged piping & properly re-ran approx 40ft of lin PVC with proper fall for drainage & proper support. Also removed & replaced the TTP valve with New & re-ran the CPUC line down into the pan. Also pulled & removed the pan & raised to proper height.

Also found that a few pex rings on the hot & cold water lines had expanded & appeared to begin causing damage. Removed all damaged fittings & re-ran New 3/4" Pex for both sides with all new brass pex fittings. Tested all work performed & Found No leaks as the fixture appears to work very well at this time with No leaks found.

5.5 hrs labor
