PORT OF CHARLESTON

Invested in Capacity

The port has experienced outstanding growth in total loaded TEUs over the past decade, most recently reporting record levels of cargo handled during fiscal year 2022 (2.85 million TEUs), as a result of key drivers such as Southeastern population growth, secular shift from West Coast to East Coast ports, and more recently shifts in manufacturing from China to other parts of Asia.

Totaling nearly \$2.8 billion, the Port's game-changing expansion program is well underway including the delivery of the new Leatherman Terminal (Mar-2021), a new access road connecting to I-26 and the new, dual access intermodal terminal.

Following its successful completion in December of 2022, the \$580 million Charleston Harbor Deepening Project increased the depth of the harbor to 52 feet, making it the deepest seaport harbor on the East Coast. 52' depth ensures mega container ships can access terminals free from tidal restriction. \$500 million investment to further modernize the Wando Welch Terminal including three (3) more 155' ship-toshore cranes and 24 rubber-tired gantry cranes which enable the Port to handle three New-Panamax ships simultaneously.

Charleston is the only Southeast Port of call for ships on the North Atlantic Express (AX1), which considerably expands the Port's connectivity with Northern Europe.

2.85M **TEUs handles** in 2022

ECONOMIC MULTIPLIER EFFECT

In South Carolina, the Port has an employment multiplier of 2.4: for every 10 SCSPA jobs created, an additional 14 jobs are generated statewide. This job creation has fueled significant container shipping volume growth over the past decade. Upon completion, the Wando Welch and Leatherman projects will boost annual TEU throughput capacity to 4.8M, 75% higher than in 2021.

Increased volume drives employment growth. Over the last decade, port-related employment grew by 2.8%, establishing South Carolina as a global manufacturing competitor in sectors like tires, automotive, and aerospace. For instance, South Carolina now produces one-third of all tires in the U.S., with Michelin's success in the Upstate playing a key role. Companies in neighboring states also leverage the Port's advantages to meet their business needs.

The economic multiplier effect of the Port stems from direct, indirect, and induced impacts. Direct effects include spending on activities like equipment, construction, and technology services, which create jobs for Port employees and suppliers. Indirect effects arise from increased purchases by Port industries, generating more demand in smaller sectors. Induced effects occur when higher wages from third-party employees are spent locally, further boosting South Carolina's economy.
