

# Preliminary Soil Evaluation: 2705 Buckner Road Williamson County

Area of Interest Interactive Map

View Extent Contiguous U.S.

(nts)- not to scale

### Legend:

- End of evaluation
- DV- Dense Vegetation

### Delineation Key:

#### 1-Good/Moderate Potential for Drip Dispersal Ground Application (DDGA)

Most soils contacted in these areas have favorable to marginally favorable properties for DDGA. However, inclusions of soils with properties considered to be unfavorable may be encountered with a more intensive evaluation. Some areas may require proven positive drainage for Interceptor Drains. Any underlying rock encountered during mapping may affect their suitability.

#### 2-Limited/No Potential

Inadequate depths to rock and/or clay (weak structured/massive) make most areas of these soils unsuitable by standard evaluation at this time.

Other features observed that would impact installation are drains, possible/potential sinkholes, areas of disturbed soils (cut/fill), existing structures and utilities.

This information was collected using a soil auger and rock probe.

**Any disturbance to these areas after this date may affect their suitability.**
