

Creekside Homes promises everyone a 5-star experience!

There are 3 reasons why we can make that promise and why our clients choose us to be their builder: Our Process, Our Team, and Our Execution.

PROCESS: Creekside Homes understands that you want your own special place that reflects your personal style and taste. Our process allows you to describe what you want, our design team draws it, you approve it, and we build it.

Our Process: Dream. Build. Thrive.

Dream Phase allows us to get in your head and understand what your dream looks like and then represent it on paper. Deliverables from this Phase are; Full Architectural Plans –permit ready, Specifications [20 pages +/-], and a lump sum quote.

Build Phase is where your project comes to life. We believe that quality is the number one priority. Therefore, we manage every project deliberately for certain metrics. On-Time, On-budget, Defect-free, Cleanliness, and Client Satisfaction. We developed a 1,000-point checklist to ensure that at every stage, quality is not left to chance. Our weekly conference calls with you will ensure that good communication is delivered. Our online system will keep your project organized from specs to finances.

Thrive Phase is the best part of the process because you can now enjoy the benefits of living in a space that has been custom-tailored to your needs and lifestyle. We follow up with regular check-ins and warranty audits to ensure that your investment is secure.

OUR TEAM: We have an incredible team of A-Players that care deeply about our clients and ensuring that they get the best result possible. Our core values are: Excellence, Own It, Results-Oriented, Team Player. We hire and fire by these values. Our team includes, Administrative, Architectural Designers, Operations, Project Managers, and Field Techs. Our Vendors are some of the best in the industry.

EXECUTION: Our clients expect the best and refuse to take unknown risks to cut costs. Close attention is paid to the requirements of time, budget, design, and craftsmanship. Years of experience have increased our expertise and capacity to integrate state-of-the-art systems and value engineering, as well as practical solutions to unique, and common design challenges.
