62 THE BUILDING 63

The +/-7.95 acre opportunity boasts over +/-89,318 SF of buildings situated on one of the main freeway arterials traversing California. With its freeway visibility and ease of access this opportunity offers unparalleled projection in the regional marketplace. The former Meek's Lumber location has high ceilings and offers a large open retail floor. The large lot size allows for room to navigate trucks or large machinery.

Site plans are intended to give a general indication of the layout only. All images and dimensions are not intended to form part of any contract or warranty.

THE AREA

A large business evaluating long-term growth and regional market penetration would find 1045 Twin View Blvd in Redding, California to be a compelling location due to its exceptional visibility and access. With direct frontage along Interstate 5, the site benefits from one of Northern California's most heavily traveled transportation corridors, capturing consistent daily traffic from both local commuters and long-haul interstate travelers. This level of exposure is difficult to replicate and provides immediate brand presence, making the property especially attractive for companies that rely on visibility, distribution efficiency, or customer convenience. Highway frontage also reduces friction for employees, vendors, and customers, translating into operational efficiency and stronger market reach.

Beyond traffic volume, the site's location offers strategic access to both the Redding and Chico submarkets, positioning the property as a regional hub rather than a single-market asset. Redding serves as the commercial and logistical center for the far North State, while Chico anchors a dense population base tied to education, healthcare, and agriculture. Occupying a centrally located site between these markets allows a large business to consolidate operations, serve multiple demand centers, and reduce redundant facilities. This regional positioning is particularly valuable for companies seeking to optimize distribution, service coverage, or administrative functions across Northern California.

The scale of the property further enhances its appeal. With 7.95 acres of land and more than 89,318 square feet of existing improvements, the site provides immediate functional capacity alongside future expansion potential. Large acreage is increasingly scarce along major highways, especially parcels that can support multiple buildings, parking, outdoor storage, or phased development. For a business planning long-term occupancy, the ability to adapt the site as needs evolve—without relocating—represents both a strategic and financial advantage. This flexibility supports growth while protecting against future land constraints and rising development costs.

From a financial standpoint, the \$7,000,000 purchase price equates to approximately \$20.21 per square foot of land, a figure that strongly supports the investment thesis. For a highway-fronting property with nearly eight acres in a primary commercial corridor, this land basis is well below replacement cost and difficult to replicate in today's market. When factoring in the value of over 89,318 square feet of existing buildings, the effective land cost becomes even more compelling, providing intrinsic value and downside protection. This pricing allows a large business to allocate capital toward operations and growth rather than excessive real estate overhead.

Ultimately, the combination of high traffic exposure, regional market access, scalable acreage, and attractive land pricing makes 1045 Twin View Blvd a strategic acquisition for a large business. The property supports both immediate operational needs and long-term expansion while offering a cost basis that is increasingly rare for comparable highway-oriented sites. In a market where visibility, logistics, and flexibility drive competitive advantage, this asset stands out as a location that aligns operational efficiency with sound financial fundamentals.
