DESCRIPTION

Subject Property consists of 160.28 +/- assessed acres of land with 154.00 +/- net planted acres of non-producing almonds. This property consists of 100% Grade 2 - Good Soils, is located in the Groundwater Service Area of SWSD and irrigated via two wells with the capacity to receive intermittent in-lieu water supply through two turnouts.

LOCATION

The Property is located in Semitropic Water Storage District (SWSD) one half-mile to the north of the intersection of Lerdo Highway and Jumper Road in between Wildwood Road and Jumper Ave less than seven (7) miles to the West of the City of Shafter in the County of Kern.

LEGAL/ZONING

Kern County Assessor Parcel Number(s): 088-100-39; 088-050-02, 03; Section 6, 7; Township 28; Range 24; Quarter; MDB&M. The property is enrolled as an agricultural preserve under the Williamson Act.

LAND, SOIL & PLANTINGS

The property benefits from 100% Milham sandy loam, 0 to 2 percent slopes MLRA 17 (196), Grade 2 - Good Soils. The property consists of non-producing almonds that will need to be removed by Buyer on a post-close basis.

WATER

Water for irrigation is supplied with groundwater. The property is situated within the boundaries of Semitropic Water Storage District and is subject to a district assessment equal to \$139.40 per enrolled acre collected by the Kern County Assessor's office. Irrigation infrastructure includes two (2) deep wells with one (1) 125 HP, and one (1) 100 HP electric motors and a combined flow of approximately 1,567 +/- GPM. The trees were previously irrigated with dual line drip and access to existing underground mainline. The property's SWSD infrastructure is subject to an intermittent service in lieu of groundwater pumping agreement through turnout(s) L-122 and L-124.

SGMA

The Sustainable Groundwater Management Act passed in 2014 and requires groundwater basins to be sustainable by 2040 with Groundwater Sustainability Plans (GSP) in place by 2020. GSP(s) may limit the amount of well water pumped, and Buyers are encouraged to consult with a professional regarding the impacts of SGMA and possible limitations to the amount of groundwater that may be pumped. For more information go to <https://water.ca.gov/Programs/Groundwater-Management/SGMA-Groundwater-Management>.

PRICE

\$1,078,000.00 (\$6,725.73 per gross acre)
All cash to be bpaid at the end of sale.

SOIL MAP

California Revised Storie Index (CA) - Summary by Map Unit - Kern County, California					
Map Unit Symbol	Map Unit Name	Rating	Component Name	Acres in AOI	Perecent in AOI
196	Milham sandy loam, 0 to 2 percent slopes MLRA 17	Grade 2 - Good	Milham (85%)	163.5	100.0%
Totals for Area of Interest				163.5	100.0%

The Revised Storie Index is a rating system based on soil properties that govern the potential for soil map unit components to be used for irrigated agriculture in California.

The Revised Storie Index assesses the productivity of a soil from the following four characteristics:

- Factor A: degree of soil profile development
- Factor B: texture of the surface layer
- Factor C: steepness of slope
- Factor X: drainage class, landform, erosion class, flooding and ponding frequency and duration, soil pH, soluble salt content as measured by electrical conductivity, and sodium adsorption ratio

Revised Storie Index numerical ratings have been combined into six classes as follows:

- Grade 1: Excellent (81 to 100)
- Grade 2: Good (61 to 80)
- Grade 3: Fair (41 to 60)
- Grade 4: Poor (21 to 40)
- Grade 5: Very poor (11 to 20)
- Grade 6: Nonagricultural (10 or less)

The components listed for each map unit in the accompanying Summary by Map Unit table in Web Soil Survey or the Aggregation Report in Soil Data Viewer are determined by the aggregation method chosen. An aggregated rating class is shown for each map unit. The components listed for each map unit are only those that have the same rating class as the one shown for the map unit. The percent composition of each component in a particular map unit is given to help the user better understand the extent to which the rating applies to the map unit.

Other components with different ratings may occur in each map unit. The ratings for all components, regardless the aggregated rating of the map unit, can be viewed by generating the equivalent report from the Soil Reports tab in Web Soil Survey or from the Soil Data Mart site. On-site investigation may be needed to validate these interpretations and to confirm the identity of the soil on a given site.
