**ACH - AUTOMATIC BILL PAYMENT**

Make your life easier with ACH bill payment! With ACH your utility payment will be automatically deducted from your checking or savings account and directly applied to your utility account.

ADVANTAGES OF ACH:

No need to worry about late fees, last minute trips to drop off payments, slow or delayed mail, or updating your debit card on file. You'll also be saving money on checks and postage.

COMMON QUESTIONS:*Will I still receive my monthly bill?*

* Yes, you will still receive your bill in the mail for you to review. The only difference is that it will now say "Pre-Authorized, Do Not Pay."

When will my bill be paid?

* Your bill will be paid on the due date and will be automatically deducted from your checking or savings account.

How do I sign up?

* Complete our ACH form and attach a voided check. Forms can be found online at smutilities.com or at our office.

Deposit Requirement: Customers whose service has been disconnected may be required to make a cash deposit or other guarantee as a condition of continued service.

Prompt Payment of Bills: Bills for service are issued monthly and payable for service rendered in the previous month. A late payment charge of 3% will be added to bills not paid within 20 days of issuance. Customers who fail to make payment by the due date are subject to procedures provided in Shawano Municipal Utilities rules covering disconnection of electric/water services. Payment to a third party, other than to an authorized pay station below, does not constitute payment. SMU will not be responsible for disputes regarding payments to third parties which are not authorized pay stations.

Insufficient Fund Charge: When a payment made to SMU and credited to a customer's account is reversed for insufficient funds or invalid information, a charge plus applicable late payment charges will be applied to the customer's account.

SUMMER SAVINGS CHECKLIST

PREPARE YOUR HOME FOR ENERGY SAVINGS THIS SUMMER

Keep your A/C running efficiently by scheduling a maintenance appointment and cleaning or replacing your filters on a regular basis.

Close your shades in the summer to block heat from getting inside your home, which causes your air conditioner to work harder.

Set your thermostat 2 to 4 degrees higher while at home and higher when you head out for the day. **Upgrade to a smart thermostat for tighter control over energy usage.**

Cool down with a fan. Fans keep air circulating, allowing you to raise the thermostat a few degrees and stay just as comfortable.

Make the switch to LED lights. These efficient bulbs not only use less electricity, they also produce less heat keeping your home cooler.

Consider preparing cold dishes, grill out or use the microwave so the oven won't heat up the house. Save even more energy by turning off the heated dry cycle on your dishwasher.

SUMMER ENERGY USE FAQs

Should I leave my A/C running at night?

Leaving the A/C on all night can lead to higher energy bills. If you're concerned about overall energy consumption and cost, you might consider opening windows and using fans if outside temperatures cool down overnight. You may also use MyAccount's rate comparison tool to explore a rate option with lower costs during off-peak (evening) hours, like Nights & Weekends Smart Plan.

Why does my bill remain high if my thermostat is set 2 to 4 degrees higher than usual?

High electric bills despite a thermostat increase could be due to various factors: an inefficient cooling system, poor insulation, air leaks, high appliance usage, thermostat inaccuracies, time-of-use rates, and additional heat sources. **Addressing these issues through maintenance, energy-efficient practices, and home improvements can help reduce costs.**

Can I be notified of high energy usage in my home?

Yes! Setting a usage threshold through MyAccount is a great way to stay on top of your utility usage. You'll receive notifications whenever your electric usage surpasses your set threshold. These alerts empower you to manage your usage, helping you stay within your desired budget. It's a proactive approach to maintaining control over your energy consumption.
