Re: Wetland Delineations for 2006 Pulaski Highway

Dear Mr. Davenport:

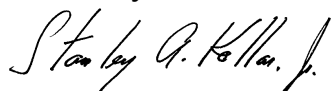

Two wetland delineations were conducted for the above indicated property to determine if any of the lower lying areas, or drainage features on the adjacent railroad right-of-way exhibited any of the 3 characteristics that would denote them as wetlands. Two data sheet sets are included for the property. Soil samples were taken for the drainage ditch on the railroad property, and vegetation was examined. No hydric soil was noted and vegetation was not hydrophytic. There was no water in the ditch at that time. The area is very steep and dangerous.

Wetlands were not located at the property, as indicated by the data sheet sets. Soils are Beltsville silt loam (BeA and BeB) which do not have a hydric soil rating.

Please see the accompanying map for sample points.

Thank you for your time and consideration. Should you have any questions, please contact me.

Sincerely,

Stanley A. Kollar, Jr.  
Principal
