ADJACENT TO PLANNED CHRISTOWN SPECTRUM REDEVELOPMENT

Christown Spectrum Mall opened in 1961 and was the first air-conditioned mall in Arizona. The shopping center is the oldest operating indoor shopping mall in Phoenix. Ownership plans to retain and add to the basic mix of uses while adding a residential component to truly create a live/work/play destination. Contributing to this is that the Light Rail runs along the 19th Avenue frontage, adding a true urban context to the site.

The Christown Spectrum Planned Unit Development (PUD) is created to capitalize on the property's location within the regional transportation corridors, expand on the city's planning and infrastructure investments, and act as a catalyst for future economic development opportunities.
