# INTRODUCTION

Sheldrake Point Vineyard, LLC. is a New York State Limited Liability Company founded in 1997. The company is licensed as a New York State Farm Winery and owns and operates a 156-acre farm located on the shores of Cayuga Lake in the Finger Lakes, a vineyard of 57 acres planted to Vinifera vines, a winery capable of producing 15,000 cases, and two tasting rooms which host over 20,000 visitors annually. The company is owned by Chuck Tauck and Fran Littin.

Our mission has been to provide guests with a hospitable and entertaining experience by providing a respectful, warm welcome and gracious service. We are stewards of our vineyard land, with a commitment to sustainable wine-growing practices and respect for the environment of our site and our neighbors. We produce distinctive wines, each with a personality that reflects the character of our site and the Finger Lakes. The quality of our vines is evidenced by our many awards, including three-time Top 100 Winery by Wine and Spirits Magazine, and New York State Winery of the Year in both 2009 and 2010.

Our waterfront location, manicured gardens, well-maintained facilities, vineyards, and estate wine production form the basis of our ability to emphasize the pleasurable connection among people, the land, and wine. With a pristine lakeside location just 20 miles from the University city of Ithaca, we are a popular destination for winery visitors.

### ESTATE VINEYARD

Wedged between two deep gorges, our east-facing vineyard gently slopes almost to the water's edge. The first estate vintage, produced from fruit picked on our site in 2000, was released in 2001.

The soils at Sheldrake Point are predominantly well-drained, gravely loam, and clay glacially deposited atop shale, limestone, and slate.

We maintain the vineyard through sustainable practices and utilize Scott Henry quadrilateral cordon trellising. By honoring the symbiotic relationship we have with the land on which our grapes are grown, and tending to it with the greatest of respect, it will continue to provide us with high-quality grapes reflective of the terroir.

When grape production exceeds the supply needed to produce our wines, we extend grape contracts to other wine companies. Our reputation for quality grapes has increased demand in recent years. In 2020, we sold 74 tons with revenue of \$90,000. In 2021, we sold 121 tons with revenue of \$211,600. In 2022 we sold 35.4 tons with revenue of \$61,700. In 2023 we sold 85.8 tons with revenue in of \$175,600.

# SEVEN BUILDINGS

Building	Sq Ft	Purpose	HVAC	Baths	Condition
Tasting Room	3,000	Retail	Dual Heat & AC	2	Very Good
Winery	7,000	Winemaking	Geo Heat & AC	2	Excellent
Shop/ Warehouse	4,600	Shop, Storage, Water	Geo Heat & AC	1	Very Good
Office / Farmhouse	2,100	Offices, Meeting, Storage	2 Zone Heat & AC	2	Very Good
Tasting Events Barn	2,600	Events & Shipping	Heat & AC	3	Very Good
Residence	1,800	Residence & Storage	Heat	2	Very Good
Unheated Barn	5,000	Storage	None	None	Good

- Buildings have parking areas supporting a total of 80 cars. Parking areas are engineered with 12" of base.
- All roadways are engineered with 18" of base and provide radius and turn-around for 60' semi-trailers.
- Public buildings are set in a landscaped network of lawns, gardens and paved sidewalks complete with underground storm drainage and underground electric.

# SYSTEMS & ENGINEERING

The following systems are installed on the property:

- **Water** – Engineered and fully permitted Cayuga Lake beach well and 5000-gallon treatment and storage facility that meets current NYS certification for public water supply. The system provides 50psi pressure feed to all buildings except the large barn and the residence. Residence water comes from the same beach well with self-contained residential treatment.
- **Sanitary Sewer** – All buildings (except the large barn and the residence) are on a fully engineered septic and sand filter with a capacity of 1,240 gallons per day. The system includes five septic tanks, one effluent tank and a 18' by 60' by 4' sand filter, all installed in 2000 and in working order with no history of problems.
- **Stormwater** – is directed into a network of 18" drains that quickly move water off the roads and parking surfaces and direct the water underground to Sheldrake Creek and to Cayuga Lake.
- **Driveways and Parking Lots** - Driveways are engineered with 18" of base - parking areas with 12" of base.
- **Lighting** – is provided by eight driveway light poles with LED lamps and twelve parking area bollards with incandescent lamps. In addition, buildings are mounted with appropriate outdoor lights on either timers or sensors.
- **Communications** – All buildings are connected underground with fiber optic for high-speed data and telephone.
- **Buried Electric** – All buildings (except the residence) are connected to a central transformer and main panel. All electric feed is underground. 800' of primary service wires and phone poles that once crossed the property have been buried in order to improve the lake views.
- **Solar** – A 90-panel, 15,000-watt solar array is installed on the roof of the vineyard shop and attached to five Sunny Boy inverters. These supplement the electricity use of all five buildings when the sun shines. (No battery storage.)
- **Geothermal** - HVAC for the Winery and the Shop / Warehouse is provided by geothermal heat pumps connected to six 450' deep loop fields, substantially reducing dependence on fossil fuels.
- **Security** – All buildings are protected with keypad security for break-in and fire, all linked to a central station.

# PRIMARY FARM & VINEYARD EQUIPMENT

Description	Power	Condition
2006 New Holland Tractor	Diesel	Very Good
1999 Massey Ferguson Tractor	Diesel	Good
