PROJECT OVERVIEW

Mills River Logistics Center is a premier Class A speculative industrial development situated on approximately 75 acres in Mills River within Henderson County and the greater Asheville Metropolitan Statistical Area. Strategically positioned directly southwest of Asheville Regional Airport and located less than one mile from the airport, the project offers exceptional regional and national accessibility and connectivity to major Southeast distribution corridors.

The development will deliver approximately 517,860 square feet of modern warehouse and distribution space

across two state-of-the-art industrial buildings designed to accommodate a wide range of logistics, distribution, manufacturing, and e-commerce operations. Mills River Logistics Center is planned to meet the increasing demand for institutional-quality industrial product within the rapidly expanding Western North Carolina market, offering efficient building design, strategic transportation access, and proximity to the region's growing labor force, manufacturing base, and air cargo infrastructure.
