Comments:

Contractor and job foreman on site and discuss the following:

Building: discussed was the basement and lower level unit.

- maintain one hour fire separations between the upper unit and the lower unit and between the lower unit and the basement is required.

- at dropped/lowered ceiling locations, flat blocks within the studs bays are required to prevent vertical to horizontal communication.

- in the lower unit, repair the door frame opening at the bedroom.

- at the chase where the abandoned, vertical duct is located, fire block/draft stop is required at each floor and ceiling level.

- under the bathtub, close up to maintain one hour fire separations.

- installation of all opened walls and ceilings is required. R30 for the ceiling, R19 at the floors, R15 at the stud exterior walls.

Electrical:

- at areas of opened walls all electrical is required to be brought up to current code standards.

- there was no discussion on replacing sub panels or service panels.

Plumbing:

- A determination was to be made on whether or not to keep the existing tub and shower wall assembly.

- water pipe and gas pipe runs appear to be in OK.

- DWV pipe installation in the basement needs support and proper slope.

Mechanical:

- currently, the wall heater vent has multiple turns and bends. The manufacturer installation book is required to determine if this is installed per the manufacturer requirements. If it is required to go straight up to vent, a shaft would be required from the ceiling of the lower unit to the underside of the roof.

- The range hood duct is flexible metal, 4 inch diameter pipe, which is not allowed. A minimum of 6 inch diameter. Smooth pipe is required. The installation of the pipe is required to maintain one hour fire rated separations between the upper and lower unit.

Comments:

Contractor and job foreman on site and discuss the following:

Building: discussed was the basement and lower level unit.

-maintain one hour fire separations between the upper unit and the lower unit and between the lower unit and the basement is required.

1. at dropped/lowered ceiling locations, flat blocks within the studs bays are required to prevent vertical to horizontal communication.

2. at the chase where the water heater be vent is located, fire block/draft stop is required at each floor and ceiling level.

Electrical:

3. at areas of opened walls all electrical is required to be brought up to current code standards.

Only the kitchen requires more receptacles to bring the unit up to current code standards.

Note: there was no discussion on replacing sub panels or service panels.

Plumbing:

-A determination was to be made on whether or not to keep the existing tub and shower wall assembly.

-water pipe and gas pipe runs appear to be in OK.

4. DWV pipe installation in the basement needs support and proper slope.

Mechanical:

5. currently, the wall heater vent has multiple turns and bends. The manufacturer installation book is required to determine if this is installed per the manufacturer requirements. If it is required to go straight up to vent, a shaft would be required from the ceiling of the lower unit to the underside of the roof.

6. The range hood duct is to come. The installation of the vent duct is required to maintain one hour fire rated separations between the upper and lower unit.

7. In the basement and main level, the water heater's vent pipe is required to maintain 1 inch clearance to combustibles.

8. Currently, the basement water heater vent pipes are being reduced, which is not allowed.

11/26/24

LOWER UNIT:**Building:**

1. In the rooms where the wallboard has been removed from the ceiling, RC channel is required before installing 5/8 inch type X wallboard. A minimum of R13 ceiling insulation is also required in those areas. This is the minimum standard to meet STC 50 requirements.

2. Draft stops are required to prevent openings between the basement and the lower level unit. this occurs in adjacent areas to the kitchen.

3. The shower wall is to come.

Electrical:

4. Electrical approval requires receptacle spacing in the kitchen to meet code requirements. A receptacle is required within 2 feet from the edges of the sink and stove. Photos to verify in wall wiring is to be acceptable.

Plumbing:

5. In the basement, ABS drain lines require supports at 4 feet OC. Maintain slope to drain.

6. The shower pan test is to come.

Mechanical: range hood duct is approved to cover.

7. The two basement water heaters require the following corrections:

A. Secure the draft hood, and restore its original configuration.

B. The vent connector requires a minimum of 1 inch from combustible material.

C. The vent connector requires a upward slope to the exterior wall.

D. The tube water heater vents are required to terminate a minimum of 12 inches above the roof.

8. The venting of the water heater had multiple violations. The manufacturer installation book is required to inspect the replaced BW vent. Maintain one hour fire rating separations between this unit and the upper unit. If a shaft is installed, it is required to extend from the ceiling of the main lower unit to the underside of the roof sheathing. A reinspection is required. Do not cover until it has been approved.

UPPER UNIT: The rooms at the back of the living room will undergo repairs. With the removal of wallboard to evaluate, more work may be undertaken.

9. The wallboard will be removed from the floor upward for approximately 4 feet.

10. The flooring with possible replacement of the sheeting, will be replaced.

Electrical: no work is planned.

Plumbing:

11. The kitchen sink will be replaced.

12. In the laundry area, the standpipe and the sink vent do not meet plumbing code requirements. Re-pipe as required to pass inspections.

Mechanical: no work is planned.

Comments:**LOWER UNIT:**

Building: wallboard approved, except for correction below, OK to start finishing the wallboard.
Shower wall approved.

1. The bathroom ceiling wallboard requires 5/8 inch type X wallboard. Photo to verify to be acceptable.

Electrical: in wall cable runs are approved to cover.

Plumbing:

2. In the basement, ABS drain lines require supports at 4 feet OC. Maintain slope to drain.

3. The shower pan test is to come.

4. At the exterior right side, it appears ABS lines have been installed without an inspection. The inspection of this work is required.

Mechanical:

5. The two basement water heaters require the following corrections:

A. The vent connector requires an upward slope to the exterior wall.

B. The two water heater vents are required to terminate a minimum of 12 inches above the roof.
Exterior vent requires a reinspection.

UPPER UNIT: The rooms at the back of the living room will undergo repairs. With the removal of wallboard to evaluate, more work may be undertaken.

9. The wallboard will be removed from the floor upward for approximately 4 feet.

10. The flooring with possible replacement of the sheeting, will be replaced.

Electrical: no work is planned.

Plumbing:

11. The kitchen sink will be replaced.

12. In the laundry area, the standpipe and the sink vent do not meet plumbing code requirements.
Re-pipe as required to pass inspections.

Mechanical: no work is planned.
