Danielle,

All electrical out at our property was done by Robert Mills, Master Electrician and owner of MAP MAP Services electrical in Lampasas. Contact: 512-540-2667

I'm not an electrician but I am going to try my best to explain what we have.

We have two 200 amp boxes because we installed during covid and there were no 350 boxes. One of them is powering the tiny home and the shop with the water well. The other box only powers the mini office building. We also added a 50 amp at the end of the mini office for an RV hookup. We had all the wires continue to that point from the back side of the mini office because we planned on building out the 600 sq ft building we just added to the second box also but never completed that project.

We also added a generator loop to the main electrical panel outside just in case we ever lost power we could easily power the whole tiny home on a natural gas generator we have.

That's the best I can do to explain it. You are more than welcome to contact Robert (he's fantastic) if you need more technical information.

Does that help?

Jennifer
