The southeast adjacent property at 1966 Lane Avenue South is registered as a leaking underground storage tank (LUST) site and an underground storage tank (UST) site under the name Thoni Station. Based on historical sources reviewed, this property was occupied by a gas station and auto repair shop from the late 1960s to late 1980s. According to the Florida Department of Environmental Protection (FDEP), one (1) 6000-gallon leaded gasoline UST, two (2) 6000-gallon unleaded gasoline USTs, and two (2) waste oil USTs of unknown volume were removed from the site in July 1990. A Contamination Assessment Report (CAR) prepared in

November 1990 found petroleum hydrocarbons in soils and groundwater at the site, and determined that groundwater at the site was flowing to the northwest. An addendum to this report issued in August 1991 determined that the extent of the contamination was limited to the areas immediately surrounding the former tank pits. A sampling event in March 1994 found the gasoline additive methyl tert-butyl ether (MTBE) in one well slightly above the site rehabilitation level (SRL) of 50 parts per billion (ppb), and in a second well below the SRL; all other wells were non-detect for petroleum contaminants of concern (COCs). In addition, soils at the site were screened using an organic vapor analyzer (OVA) and no petroleum hydrocarbon vapors were detected. The FDEP issued a letter of no further action (NFA) required for the LUST incident on December 21, 1994, and the site was subsequently redeveloped for commercial use. Based on its regulatory status and the soil and groundwater sampling results, this site has not likely impacted the subject property.

Based upon the review of federal and state records, a visual reconnaissance, presumed groundwater flow, distance, and/or geological characteristics in the area, there is no evidence to suggest any of the surrounding sites listed in the database report have impacted the subject property.

## CONCLUSIONS

---

UES Consulting Services, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the aforementioned subject property. The purpose of the Phase I Environmental Site Assessment is to ascertain if there are any ***recognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental conditions, and/or de minimis conditions*** associated with the subject property.

### **Recognized Environmental Conditions**

According to ASTM Practice E1527-13, *recognized environmental conditions* means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to a release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. A release or threatened release of a hazardous substance includes any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping or disposing into the environment (including the abandonment or discarding of barrels, containers and other closed receptacles containing any hazardous substance, pollutant or contaminant).

This assessment has determined there are ***no recognized environmental conditions*** associated with the subject property.

### **Controlled Recognized Environmental Conditions**

According to ASTM Practice E1527-13, *controlled recognized environmental conditions* is defined as *recognized environmental conditions* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of

required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

This assessment has determined there are ***no controlled recognized environmental conditions*** associated with the subject property.

**Historical Recognized Environmental Conditions**

According to ASTM Practice E1527-13, *historical recognized environmental conditions* is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

This assessment has determined there are ***no historical recognized environmental conditions*** associated with the subject property.

**De Minimis Conditions**

According to ASTM Practice E1527-13, *de minimis conditions* are environmental conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions* nor *controlled recognized environmental conditions*.

This assessment has determined there are ***no de minimis conditions*** associated with the subject property.

**RECOMMENDATIONS**

---

No further environmental studies are recommended at this time.

# PHASE I

## ENVIRONMENTAL SITE ASSESSMENT

### 1.0 INTRODUCTION

UES Consulting Services, Inc. (UES) was retained by Plaza Street Partners (hereafter referred to as Client) to perform a Phase I Environmental Site Assessment (ESA) of 1936 Lane Avenue South in Jacksonville, Florida (subject property). UES performed the ESA in conformance with the provisions of the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-13, thereby satisfying United States Environmental Protection Agency's (U.S. EPA) "Standards and Practices for All Appropriate Inquiries (AAI); Final Rule" (40 Code of Federal Regulations Part 312) 78 Federal Register 79319 (December 30, 2013).

This report presents the results of a Phase I ESA of the subject property conducted by UES. The purpose of the Phase I is to identify historical, existing, or potential environmental hazards.

### 2.0 SCOPE OF WORK

This Phase I environmental assessment has been performed in accordance with the guidelines set forth in the American Standard for Testing and Materials (ASTM) Practice E1527-13. The purpose of the Phase I is to identify any *recognized environmental conditions* associated with the subject property. This is accomplished by an on-site visual inspection of the interior and exterior of the subject property, a visual reconnaissance of the adjacent properties and surrounding area, a regulatory database review, historical records research, and interviews.

The investigation and inclusion of the following environmental items are *NOT* currently required by ASTM Practice E1527-13:

Asbestos	Mold	Industrial Hygiene
Radon	Health and Safety	High-voltage Power Lines
Lead-based Paint	Ecological Resources	Regulatory Compliance
Lead in Drinking Water	Endangered Species	Historic Site Registry
Indoor Air Quality	Wetlands

##### Current Owner

*Mr. Damon Alexander  
Owner Representative  
Interviewed: January 11, 2020*

Mr. Alexander stated that the subject property has been in his family's possession since the 1940s, and that his father constructed the current subject property improvements circa 1950. He was not aware of any hazardous material releases, underground or above-ground storage tanks, PCBs, or other items of potential environmental interest at the subject property.

##### Previous Owner(s)

*Information to contact the previous owner(s) was not provided by the client.*

Persons knowledgeable with the subject property, and local, state, and/or federal agencies contacted for information are detailed below:

*Jacksonville Fire District  
Contacted: January 15, 2021*

The Fire Department has not responded to a request for information at this time. An update will be issued should information be received that alters the conclusions of this report.

## 5.0 HISTORICAL RESEARCH

ASTM Practice E1527-13 requires the review of only as many historical sources necessary, reasonably ascertainable, and likely to be useful to determine prior uses of the subject property back to 1940, or the subject property's first development (whichever is earlier).

### 5.1 CITY DIRECTORIES

Historical city directories were reviewed at approximate 5-year intervals (if available) to ascertain if past tenants would pose an environmental concern to the subject property. Listings for the subject property were as follows:

YEAR OF DIRECTORY	LISTING
1920-1968	Target street not listed
1969-2017	Residential listings

### 5.2 FIRE INSURANCE MAPS

Sanborn fire insurance maps were originally produced for the fire insurance industry and often identified environmental items, such as fuel tanks, and also identified structures that existed on a property at the time the map was produced. The availability of Sanborn fire insurance maps for certain areas is limited or non-existent.

Sanborn fire insurance map coverage was not available for the subject property.

### 5.3 AERIAL PHOTOGRAPHY

Aerial photographs of the subject property were obtained and reviewed. Descriptions of the subject property and adjacent properties as viewed on each year's photograph are included below, and copies of the aerial photographs are included in Appendix C.

YEAR OF PHOTOGRAPH	DESCRIPTION	
1943	SUBJECT PROPERTY	Shown as vacant land

#### 5.4 TOPOGRAPHIC MAP

Current and historical U.S.G.S. topographic maps of the subject property were reviewed for structures, objects, or items of environmental concern, such as landfills, dumps, tank farms, and petroleum pipelines. A review of the maps revealed no items of environmental concern on or adjacent to the subject property. A copy of the 2012 topographic map is included as Figure 3.

#### 5.5 CHAIN-OF-TITLE

Recorded land titles are records usually maintained by the county recorder of deeds which detail ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against the subject property. Due to state land trust regulations and laws, land title records will often only provide trust names, bank trust numbers, owner's names, or easement holders, and not information concerning previous uses or occupants of the subject property. For these reasons, this report has relied upon other standard historical information sources assumed to be more accurate or informative than recorded land titles.

## 5.6 PRIOR ENVIRONMENTAL REPORTS

There were no prior environmental reports provided by the client.

## 5.7 AGENCY FILE REVIEWS

The southeast adjacent property at 1966 Lane Avenue South is registered as a leaking underground storage tank (LUST) site and an underground storage tank (UST) site under the name Thoni Station. Based on historical sources reviewed, this property was occupied by a gas station and auto repair shop from the late 1960s to late 1980s. According to the Florida Department of Environmental Protection (FDEP), one (1) 6000-gallon leaded gasoline UST, two (2) 6000-gallon unleaded gasoline USTs, and two (2) waste oil USTs of unknown volume were removed from the site in July 1990. A Contamination Assessment Report (CAR) prepared in November 1990 found petroleum hydrocarbons in soils and groundwater at the site, and determined that groundwater at the site was flowing to the northwest. An addendum to this report issued in August 1991 determined that the extent of the contamination was limited to the areas immediately surrounding the former tank pits. A sampling event in March 1994 found the gasoline additive methyl tert-butyl ether (MTBE) in one well slightly above the site rehabilitation level (SRL) of 50 parts per billion (ppb), and in a second well below the SRL; all other wells were non-detect for petroleum contaminants of concern (COCs). In addition, soils at the site were screened using an organic vapor analyzer (OVA) and no petroleum hydrocarbon vapors were detected. The FDEP issued a letter of no further action (NFA) required for the LUST incident on December 21, 1994, and the site was subsequently redeveloped for commercial use. Based on its regulatory status and the soil and groundwater sampling results, this site has not likely impacted the subject property.

The subject property and additional adjacent properties were not listed in any state or federal regulatory databases. Therefore, additional file reviews were not conducted.

## 5.8 DATA FAILURE

There was no significant historical data failure encountered that prohibited the determination of the history of the subject property.

## 5.9 SITE HISTORY SUMMARY

Prior to the current improvements, the subject property was vacant land. Based on historical records reviewed, there does not appear to be prior uses, tenants, or structures on the subject property that would constitute any recognized environmental conditions.

## 6.0 USER PROVIDED INFORMATION

In order to meet the required guidelines of ASTM E1527-13, and the EPA's All Appropriate Inquiries (AAI) Rule, certain information is to be provided by the user. The user is defined as the potential purchaser of the property, a potential tenant of the property, an owner of the property, a lender, or a property manager. The following information was provided by Ms. Amber Johnson.

### 6.1 TITLE RECORDS

The purpose of the title report is to identify environmental liens or activity and use limitations that may be recorded against the subject property.

An environmental lien is a charge or encumbrance upon the title of a property to secure payment of costs, damages, or debts incurred out of response actions, clean-up, or other remediation of hazardous substances or petroleum products on the property.

Activity and use limitations (AULs) are legal or physical restrictions on the use of, or access to, a property to reduce or eliminate potential exposure to hazardous materials in the soil or ground water on a property. AULs may also be in place to prevent activities on the property that could interfere with the effectiveness of a response action put into effect to protect against exposure of hazardous materials in the soil and/or ground water.

Ms. Johnson was not aware of any environmental liens or AULs recorded against the subject property.

### 6.2 SPECIALIZED KNOWLEDGE

According to ASTM guidelines, specialized knowledge or experience would include the involvement of the user in the same line of business as the current or former occupants of the subject property, or an adjoining property, so that the user would have specialized knowledge of the possible chemicals and/or processes used by the same type of business.

Ms. Johnson had no specialized knowledge of the subject property.

### 6.3 COMMONLY KNOWN/REASONABLY ASCERTAINABLE INFORMATION

Ms. Johnson had no information regarding prior uses or chemical storage, releases, or cleanups at the subject property.

### 6.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Ms. Johnson stated that the purchase price for the subject property reasonably reflects its fair-market value.

#### 6.5 REASON FOR REQUESTING PHASE I

According to Ms. Johnson, the Phase I was requested due to a purchase of the subject property.

#### 6.6 USER QUESTIONNAIRE

A copy of the user questionnaire is included in Appendix D.

## 7.0 PHYSICAL SETTING

<b>SOILS</b>	According to the USDA Soil Survey, the soil in the area of the subject property is classified as Albany fine sand. A typical soil profile is fine sand to a depth of 50 inches, followed by fine sandy loam to 62 inches, and sandy clay loam to 88 inches in depth. Albany fine sand is somewhat poorly drained with slow infiltration rates and is classified as a partially hydric soil.

### 8.4 SUMMARY OF ADJACENT PROPERTIES

A visual reconnaissance, a review of state and federal databases, and a review of available historical records were performed to determine if any environmental concerns existed that could impact the subject property.

There was no evidence to suggest that any of the current or past uses of the adjacent properties have impacted the subject property. The subject property is located in an area consisting of commercial and residential development. There were no extensive industrial or manufacturing activities observed within a close proximity of the subject property.

According to city directories, a dry cleaner/laundromat was located in the east adjacent multi-tenant retail/office building from approximately 1981 to 1994. Dry cleaners are generally considered potential environmental concerns due to the use of chlorinated solvents and the generation of large quantities of hazardous waste. However, this facility operated under modern environmental regulations for the majority of its tenancy and was never required to register as a RCRA hazardous waste generator, which means it was likely a drop-off location only and no dry cleaning took place on-site. In addition, based on topography it is presumed that groundwater in this area flows in a north-northeasterly direction toward the Cedar River/Wills Branch Creek, away from the subject property. Based on these

circumstances, this former adjacent use has not likely impacted the subject property.

See Section 5.7 for a discussion of the former southeast adjacent gas station/auto repair shop.

## 9.0 DATABASE REVIEW

UES Consulting reviewed available information provided by Environmental Data Resources (EDR) to evaluate potential environmental concerns with respect to the subject property and the area where the subject property is located. A brief description of each database searched, the designated search distance, and the sites found in each designated search area, are described below. The database report, including a map of the identified sites, is included in Appendix E.

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### *Federal CERCLIS NFRAP site list*

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

An online review and analysis by UES CONSULTING SERVICES, INC of the SEMS-ARCHIVE list, as provided by EDR, has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

### ***Federal RCRA generators list***

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

An online review and analysis by UES CONSULTING SERVICES, INC of the RCRA-VSQG list, as provided by EDR, has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. ## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. ## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
