# BENEFITS OF DEPRECIATION

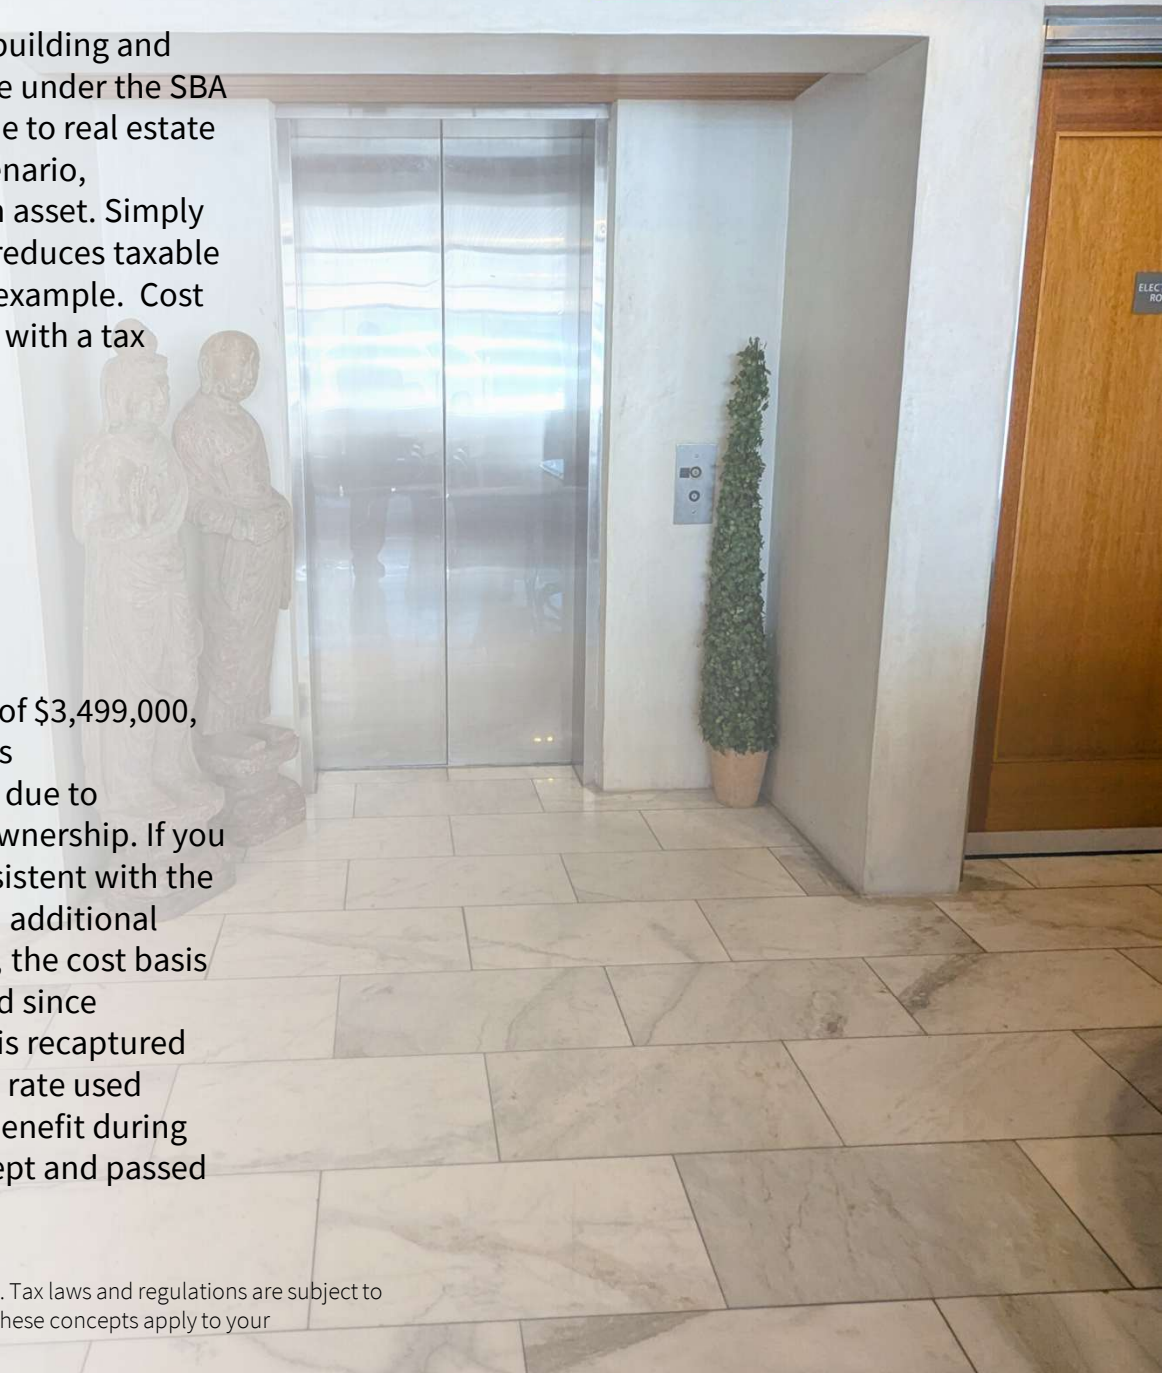

Assume a business owner or trust personally purchases the building and leases it to his/her business at a market rate (this is allowable under the SBA program). This enables the owner to convert business income to real estate income sheltered in part by depreciation. In terms of this scenario, depreciation is the spreading of cost over the useful life of an asset. Simply stated, a portion of the cost of the building (excluding land) reduces taxable income, and thus tax liability, for a period of 10 years in this example. Cost segregation and depreciation schedule should be confirmed with a tax professional.

## In this scenario, let us assume the following facts:

Purchase Price:	\$ 3,499,000
Building Size:	17,597
Percentage of Building Value to Land:	65/35%
Owner's Personal Income Tax Bracket:	50%

The amount subject to depreciation, in this example, is 65% of \$3,499,000, or \$2,274,350. Spread over 10 years, the deduction per year is approximately \$227,000. At a tax rate of 50%, the tax savings due to depreciation would be approximately \$114,000 per year of ownership. If you are considering this on a monthly per-square-foot basis consistent with the example on the previous page, this tax savings equates to an additional ownership benefit of \$0.54/sf per month. As time progresses, the cost basis of the building is being reduced by depreciation accumulated since purchase. Should the owner decide to sell, the depreciation is recaptured and taxed, but typically at a lower rate than ordinary income rate used when the deduction was realized. This yields an overall tax benefit during the building ownership period, especially if the building is kept and passed down to future generations.
