

ORMS EnviroFlash™

Information:

Land - Commercial, Job Name: Springfield Commercial Land
NW Corner of 28th St & Marcola Road
Springfield, OR

Date: January 12, 2023

File #: WFD.EF.16217

We have conducted an ORMS EnviroFlash™ Report for WaFd Bank based upon review of the available records described below and recommends the following:

Low Risk

Elevated Risk

Recommendation

Based solely on the information reviewed as part of this report and described below, **the subject property is considered a low risk**, per the risk tolerance of WaFd Bank (WFD).

Property information

- Based on information provided by the client and a limited internet search, the subject property is 1.14-acre parcel of undeveloped land. The construction of an optical surgical center is proposed.

Government Records

- The subject property does not have any records or issues identified in the ERIS™ Report (“No sites found for target address”).
- Ten (10) database records are noted within 1/8 of a mile from the subject property.
 - Commercial Tank Fabrication is located at 2690 Marcola Road, approximately 20 feet west of the site and is listed on the FINDS/FRS (Registry ID 110014266052) and LUST (LUST ID 20-90-43258) databases. According to the FINDS/FRS database this facility is on this database due to it being listed on the LUST database and the LUST database indicates that this facility received a No Further Action letter on March 22, 1991. Based on the regulatory status, this facility is considered unlikely to affect the subsurface of the subject site.
 - Russ Steel is located at 2020 North 31st Street, approximately 150 feet northeast of the site and is listed on the FINDS/FRS (Registry ID 110014266034) and LUST (LUST ID 20-90-4329) databases. According to the FINDS/FRS database this facility is on this database due to it being listed on the LUST database and the LUST database indicates that this facility received a No Further Action letter on March 25, 1991. Based on the regulatory status, this facility is considered unlikely to affect the subsurface of the subject site.

LIMITATION OF LIABILITY

This report was prepared for the use of WaFd Bank exclusively. This report is based solely on the review of environmental data from ERIS obtained by ORMS and contains certain information obtained from a variety of public and other sources reasonably available to ERIS. The EnviroFlash™ is considered a cursory review and it cannot be concluded from this report that coverage and/or information for the subject and surrounding properties does not exist from other sources. This report did not include a review of any separate environmental documentation obtained independently by WaFd Bank unless specifically noted. A prior report was not provided for review.

- Gas Station (Formerly), and Macola Meadows is located at 28th and Marcola Road, approximately 130 feet southeast of the site and is listed on the FINDS/FRS (Registry ID 110014257393 and 110037768369), LUST (LUST ID 20-92-4022) and SPILLS (Incident No. 2021-2127) databases. According to the FINDS/FRS database this facility is on this database due to it being listed on the LUST and the Oregon DEQ's State Master database. The LUST database indicates that this facility received a No Further Action letter on February 5, 1992. And the Spills database indicates that on August 10, 2021, a caller reported that trucks have been spilling resin onto the roadway as they depart the Arclin facility creating an unsafe sheen on the roadway, with no additional information provided. Based on the regulatory status and inferred topographic gradient, this facility is considered unlikely to affect the subsurface of the subject site.
- Alert Electric is located at 1970 North 28th Street, approximately 250 feet southeast of the site and is listed on the LUST (LUST ID 20-94-4041) and UST (Facility ID 11369) databases. According to the LUST database this facility received a No Further Action letter on April 29, 1994. And the UST database indicates that one UST has been decommissioned as of June 21, 1999. Based on the regulatory status and inferred topographic gradient, this facility is considered unlikely to affect the subsurface of the subject site
- Nineteen (19) database records are noted between $\frac{1}{8}$ – $\frac{1}{4}$ mile from the subject property. Based on the regulatory status, distance, and or inferred topographic gradient, these facilities are considered unlikely to affect the subsurface of the subject site.

LIMITATION OF LIABILITY

This report was prepared for the use of WaFd Bank exclusively. This report is based solely on the review of environmental data from ERIS obtained by ORMS and contains certain information obtained from a variety of public and other sources reasonably available to ERIS. The EnviroFlash™ is considered a cursory review and it cannot be concluded from this report that coverage and/or information for the subject and surrounding properties does not exist from other sources. This report did not include a review of any separate environmental documentation obtained independently by WaFd Bank unless specifically noted. A prior report was not provided for review.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Created by Init:	CRICHAR		
Comment:			

Potential lead contamination to soils surrounding building from indoor firing range.[CAR 1/18]

Narrative ID:	5757023	Created on Dt:	01/30/2018
Narrative Code:	SUMM	Last Updated by Init:	CRICHAR
Narrative Desc:	Current Site Summary Statement	Last Updated on Dt:	10/27/2020
Created by Init:	CRICHAR		
Comment:			

The building was constructed in 2009 and has been used by the Oregon Military Department for various military preparedness activities. An indoor firing range was located along the eastern edge of the building. Contamination is the result of lead dusts from firearm use migrating out of the building through ventilation systems and depositing on the roof and in nearby soils. Lead dusts deposited on the roof were then carried by storm water down to soil near the building. The focus of DEQ's review and of this closure is limited to the lead that migrated outside of the building. Only soils are believed to have been impacted by lead. Documentation was presented that shows lead in soils is non-mobile and unlikely to contaminate shallow groundwater. Lead remains present in shallow soil at levels below DEQ's risk based concentrations and does not pose a health risk under any property use scenario. No soil cleanup was conducted. Lead dusts inside the building were reportedly remediated under the oversight of the National Guard Bureau Regional Industrial Hygienist. The National Guard Bureau's self-imposed cleanup standard was the Federal Housing and Urban Development child occupied building screening level. DEQ was not involved in this work and did not review any related documentation. The property is expected to remain for occupational use and is expected to remain connected to municipal water. DEQ has only evaluated lead dusts from the former indoor firing range. No other identification or assessment of potential sources of contamination has been evaluated by DEQ.

Narrative ID:	5758008	Created on Dt:	10/27/2020
Narrative Code:	REMA	Last Updated by Init:	CRICHAR
Narrative Desc:	Remedial Action	Last Updated on Dt:	10/27/2020
Created by Init:	CRICHAR		
Comment:			

Investigation showed no additional remedial action is necessary.

(7/7/98 MAF/SRS) In the summer of 1992, CSC Environmental Services removed four underground storage tanks from the site: 2,000-gallon and 3,000-gallon aviation fuel tanks, a 1,000-gallon gasoline tank, and a 550-gallon heating oil tank. 900 cubic yards of gasoline contaminated soils and 400 cubic yards each of diesel fuel and bunker oil contaminated soils were excavated and treated on-site in separate treatment cells. DEQ's LUST program signed off on the excavation in September 1992. Treatment was completed in August 1993, and treated soils were apparently left at the site. In January 1996, the site entered DEQ's Voluntary Cleanup Program. A potential purchaser was concerned with a detection of 820 ppb dinoseb in the shallow groundwater. The site was referred to the Site Response program in July 1996 as a potential orphan when the Ruberg estate was unable to pay for further investigation. However, additional sampling by DEQ indicated that the site was not seriously contaminated. The site was purchased in early 1997, and the purchaser signed a Prospective Purchaser Agreement with DEQ in June 1997. The agreement required that the purchaser clean up soil contamination and install groundwater monitoring wells. The purchaser completed a soil removal project in December 1997, and installed monitoring wells in the spring of 1998. The purchaser was also required to conduct a risk assessment. DEQ planned to sample the wells and determine if further groundwater monitoring and cleanup were necessary. (12/20/00 BET) Contaminated soil was removed as part of the PPA. Based on removal activities specified in the PPA and RI/FS, the contaminated soil portion of the project received an NFA in November 1998. Monitoring wells were sampled in February 1999 through January 2000. Dinoseb was detected in MW-1 at 88 ug/L, which is above the tap water PRG of 36 ug/L. In June 1999, MW-4 & MW-5 were installed and MW-1 was decommissioned. Based on the limited horizontal extent of dinoseb in groundwater, it was determined that the high concentration of dinoseb in MW-1 was due to residual contamination in the silty zone near the excavation footprint. Dinoseb was detected below the PRG in downgradient well MW-4, and it was determined that groundwater contamination is very local and likely will not become a threat to human health. Based on the results of the additional groundwater monitoring, DEQ determined that no further action was necessary for dinoseb contamination in groundwater, and that no further action was needed at the site as a whole.

(7/7/98 MAF/SRS) Springfield Airport was a private airfield owned by Harry Milton Ruberg. Ruberg operated the airfield under the business name McKenzie Flying Service from about 1960 until the airfield closed in the late 1970s. Henderson Aviation Company leased a hanger at the airfield and operated a crop dusting service during the 1970s. (Henderson is currently operating out of Junction City; see ECSI #1169 for more information). A May 1990 Property Transfer Assessment by Hahn and Associates identified two areas of concern: underground storage tanks (USTs) associated with McKenzie, and potential pesticide disposal by Henderson. Tetra Tech completed a Preliminary Assessment (PA) at the site for DEQ in May 1991, and recommended sampling of on-site soils. The Estate of Harry Ruberg retained CSC Environmental Services in 1992 to remove the underground storage tanks and sample for pesticides near the Henderson Aviation hanger. Sampling found soil contaminated with gasoline, diesel fuel, and bunker oil near the storage tanks, while soil contaminated with pesticides was found near Henderson's hanger. DEQ used the information gathered by CSC to complete

Comment:			

(6/22/06 PSR/SAS) Site is a low priority for screening. Approximately 63 tons of impacted soils were excavated from the site in early 2006. (12/01/09 SJS/SAS) Site priority raised from low to medium based on issues at nearby sites.

(6/8/93 PJT) This site was screened for EPA as part of the EPA/GIS screening process. No background information was submitted to DEQ by Springfield Die Cast, even after four follow-up calls from DEQ. As of June 8, 1993, the requested information still has not been submitted. DEQ has conducted a site drive-by, and found no indications of potential risk.

DEQ reviewed a 2002 Phase I ESA and other documents and determined that there is no documented or suspected release associated with the site. G. Brown 3/14/08

(6/8/93 PJT) SAS has not been able to screen Springfield Die Cast due to the lack of information. This site has been identified by EPA as being located in a vulnerable area. The current lack of available information indicates that additional investigation of the site is warranted.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

(7/95 JAK/SRS) TCA was confirmed in a municipal well near the PDDA site (2000 yds NW). Well is used as a backup well for the Springfield Utility Board (SUB). Decommissioning and excavation of an inactive UST at the PDDA site in 10/89 led to discovery of surrounding TCA-contaminated soils. However, subsequent soil and groundwater samples, collected under a rigorous QA/QC program, have not shown the presence of TCA.

A 1992 site investigation, which included collection of soil and groundwater samples, identified 3 areas of soil contamination at site: former UST location, steam-cleaning area drain, and an oil/water separator and sump. Groundwater is contaminated in former UST location.

Comment:

(1/17/96 JAK/SRS) Site investigation field work (installation of monitoring wells along with soil, groundwater, and surface water sampling) began in 12/91. Results showed high TPH and VOC concentrations in soils near the location of the former waste oil UST and the presence of aromatics and chlorinated benzene in the groundwater, but no TCA (or its breakdown products) was found in soil or groundwater samples. PDDA submitted a work plan to DEQ on 12/18/92 for soil remediation. Removal activities were conducted during 8/93, including excavation of contaminated soils and underground pipes in the area of the former UST, steam cleaning area, and along sewer and discharge pipes. Project closeout proceedings are underway. A Certificate of Completion for the site investigation and removal action was issued on 9/13/95 after a public comment period. The public comment period will be conducted 7/1-8/1/95. No further actions will be proposed for this site at this time. (Closed as a SRS project on 10/6/95.)

During an investigation of the Pacific Detroit Diesel Allison site, TCA was discovered in groundwater beyond the site's boundaries. The Springfield Utility Board (SUB)'s contractor, CH2M Hill, verified the discovery. The aquifer(s) involved is/are currently unknown. At least one inactive SUB well penetrates and screens two aquifers, potentially providing a route for contaminants to migrate from the shallow to the deep aquifer. While TCA is among the contaminants found on the PDDA site (see ECSI #1031), no direct link between that site and the groundwater contamination has been established. There may be other sources in the area, and multiple sources may have contributed to the contamination.

In 2009 Toluene was detected in 2 SUB wells at up to 41 micrograms per liter. Additional information is available in LUST file 20-94-4015.

(11/17/04 KS/ICP) In order to mitigate the impacts of silver-laden water discharge to the Q-Street Floodway, MXR's consultant conducted removal activities. Soil from the floodway bank and sediment from the floodway were removed using a vactor truck. The length of floodway that was suctioned was approximately 30 feet, starting at the outfall from the MXR facility. Confirmation samples were collected along the floodway. Based on the results of the investigation, DEQ concluded that the MXR facility does not present a threat to human health or the environment. Therefore, no further action is required.

Comment:

7/18/02: City of Springfield (City) personnel inspected the outfall that drained from the MXR facility into the Q Street Floodway. An unknown material, described as "smelly, gooey, green stuff," was discovered behind the green shed/building. The City spoke with the facility manager and it was not known where the storm drain discharged; therefore, a dye test was conducted and the dye was later observed in the Q Street Floodway. Apparently, the discharge also ran down the bank for some distance before entering the floodway.

Comment:

7/18/02: The facility's mixing room floor is washed down with a hose several times a day. The liquid went down the drain described above. Actions Taken: The facility manager was required to plug the drain, use only dry cleanup, and re-plumb the drain. An industrial waste discharge permit was needed. 8/8/02: A City inspection revealed the drain to be plugged with an air bladder type of plug. MXR now uses the drain as a sump, and the drain is periodically pumped into the sanitary sewer system.

Comment:

MXR Services is a facility that treats silver-rich effluent from other businesses. Using a patented technology, a precipitant is added to the effluent and the silver drops out. The sludge is sent to a reclaimer, and the silver is reduced and reused. MXR also accepts and recycles waste film.

(MOTT 01/31/17) Low-level detections of diesel-range and heavy oil-range petroleum hydrocarbons were detected in soil and groundwater in close proximity to hydraulic lift Hoist #1. Impacts to groundwater were observed in groundwater samples SB-7-W (collected approximately 4.5 feet south of the hoist pit), and SB-8-W (collected approximately 2 feet north of the hoist pit). No concentrations of petroleum hydrocarbons were identified in groundwater at downgradient samples SB-5-W and SB-6-W, or any other of the groundwater samples collected onsite. Impacts appear to be limited to the immediate vicinity of the hoist pit.

(MOTT 01/31/17) The site is currently in use as a maintenance facility for Springfield school district vehicles and school buses. The bus maintenance facility includes two in-ground hydraulic lift hoists and three service bays. A fourth bay used as a tire shop.

Soil and groundwater samples were collected in December 2016 to investigate possible impacts following the failure of a pressure test on hydraulic lift Hoist #1. Following repair of the seals on lift Hoist #1, the lift hoist still did not hold pressure, indicating a leak outside of the containment system may be present.

Last Updated on Dt: 03/16/2017

[March 2017] Failure of an in-ground hydraulic lift system led to leakage of hydraulic fluid outside of the containment system. Petroleum hydrocarbon detections in soil samples ranged up to 55.3 mg/kg, but there were no detections of VOCs, PAHs, or PCBs. Petroleum hydrocarbons were detected in a groundwater sample from a borehole near the leaking hydraulic hoist, at 2,570 µg/L, also with no detections of VOCs, PAHs, or PCBs. No petroleum hydrocarbons were found in groundwater from other borings downgradient or elsewhere on the property. DEQ has concluded that petroleum hydrocarbon contamination in groundwater and soil is localized in a small area near the leaking hoist pit and does not pose a hazard to human health or the environment. There are also no water supply wells on the property or nearby that could be affected by this small-volume hydraulic oil release. Therefore, DEQ made a no-further-action decision for the site in March 2017.

the leaking lift hoist remained out of service until further diagnostic testing identified the leak in the system and then it was repaired to limit any further impacts to soil or groundwater at the site.

Commercial and industrial activities occurred on all properties prior to establishment of the Roofgone, Inc. MRF. Roofgone began accepting old roofing waste in 1997 and initially used some of the ground material as fill on the site. The site also stored large piles of ground roofing waste and No Spark Bark. The business stopped receiving waste roofing materials in 2004.

Because of concern about large and growing piles of asphalt roofing waste, a DEQ MRF permit was issued to Roofgone, Inc. in March 2000. DEQ became concerned about the use of No Spark Bark near water and on residential and commercial properties and reissued the Roofgone permit in May 2005. The amended permit addressed the environmental and human health concerns about No Spark Bark.

Roofgone, Inc. operated the MRF until late 2005, citing an inability to sell No Spark Bark mulch as the reason for closure. DEQ initiated enforcement proceedings against Roofgone in January 2007 for violations of the permit. Roofgone was unable to comply with the conditions of the enforcement action and the permit was terminated in September 2008. Attempting to clean up the site, Roofgone removed over 10,000 cu. yds. of waste materials but was not able to remove all wastes. Almost 2,000 cu. yds of roofing waste were observed on-site during a November 2007 site visit. It is unknown

In 2004, DEQ became concerned about potential soil and groundwater contamination from application of bark mulches made from old roofing shingle wastes, including No Spark Bark and analyzed samples of the products. Results showed levels of contaminants in quantities of concern for human health and aquatic life.

DEQ analyses of the bark mulches detected several chemical constituents, including polynuclear aromatic hydrocarbons (PAHs) and arsenic, at levels exceeding those considered "safe" for soils located in residential and commercial settings. The chemicals of primary concern are arsenic and five petroleum-derived PAHs. Arsenic and several of the PAHs are considered probable human carcinogens by the US Environmental Protection Agency (EPA).

Asbestos had been a concern in asphalt roofing shingles, so DEQ had Roofgone sample and analyze that waste for a number of years. While the sampling was not comprehensive of all waste materials, very little asbestos was found in the waste material analytical results. Levels of asbestos on-site are likely fairly low, if existent at all.

DEQ terminated the Roofgone MRF permit in Sept. 2008. The properties were never satisfactorily cleaned up and still contain several thousand cubic yards of unprocessed and ground roofing wastes, including No Spark Bark in piles on the northern two tax lots. All tax lots are covered with a layer of ground asphalt shingles and/ or No Spark Bark, at unknown depths, which will need to be removed for site cleanup.

Roofgone Inc. operated a Material Recovery Facility (MRF) on this site, that separated old roofing waste materials for recovery of wood, metal and asphalt roofing shingles, from 1997 until it closed in 2004. The site received source separated roofing waste, primarily asphalt roofing shingles, roofing felt paper, wood shingles/ shakes and plywood. Initially the wood and metal was separated from asphalt roofing and ground and sold as hogged fuel; the metal was shipped for recycling. Asphalt roofing shingle waste was ground and sold for top dressing on gravel roads as a dust suppressant.

Over time Roofgone developed a mulch product called No Spark Bark that was composed of old asphalt shingles, felt paper and wood shingle waste. No Spark Bark was sold as a landscape mulch. Large piles of No Spark Bark or asphalt shingle waste were stored on all of the tax lots.

The site closed in 2005 and much of the waste material was removed by 2007. However, several thousand cubic yards of ground roofing waste remains piled on the northern-most tax lots. Compacted asphalt roofing waste was placed over most of the tax lots; in places up to several feet thick.

Asphalt roofing shingle waste was ground and sold for top dressing on gravel roads as a dust suppressant.

Over time Roofgone developed a mulch product called No Spark Bark that was composed of old asphalt shingles, felt paper and wood shingle waste. No Spark Bark was sold as a landscape mulch. Large piles of No Spark Bark or asphalt shingle waste were stored on all of the tax lots.

The site closed in 2005 and much of the waste material was removed by 2007. However, several thousand cubic yards of ground roofing waste remains piled on the northern-most tax lots. Compacted asphalt roofing waste was placed over most of the tax lots; in places up to several feet thick.

Comment:			

Hazardous materials stored in various containers at the property were removed in January 2009. Later that year, 100 tons of contaminated soil was removed from areas of surface staining across the facility. A surface soil sample (SS-02) from the southern property line contained diesel at 520 ppm and "residual range organics" at 2,400 ppm. Confirmation samples from a northern-property excavation showed gasoline at 1.4 ppm.

Comment:			

Contractors conducted an assessment in 2003 to the north of the site buildings where containers of hazardous materials were stored or surface staining was evident. Included was an investigation at a former above ground storage tank, identified as area of concern in a Phase I assessment. Several surface soil samples were collected and probes were installed to assess groundwater conditions. Lube oil was measured in surface soils at 130,000 ppm at sample SS-4B near the eastern property line, and diesel was at 28,000 ppm in SS-7A near a concrete slab in the property's center. Several PAHs were detected in soil at the north side of the property, as were low levels of VOCs. Groundwater samples collected from probe boreholes did not measure VOCs or PAHs above detection limits, with the exception of P7 with MTBE detected at 2.8 ppb.

The subject property is currently owned and operated by Ed Ransdell of McKenzie Chrome Plating (McKenzie). McKenzie has owned the property since about 1984. McKenzie acquired the property from Art Haynes. McKenzie specializes in show quality and triple chrome plating. McKenzie custom plates decorative nickel, brass, copper, and chrome onto a variety of metallic parts.

Prior to commercial development in 1980, the property was occupied by residential mobile home trailers. In 1980, Art Haynes developed the lot into a commercial property with a large shop. Between 1980 and 1984, McKenzie rented the large shop before purchasing the entire property.

Comment:

The Site occupies approximately 0.29 acres and consists of Tax Lot 3700 in Section 31, Township 17 South, Range 2 West of the Willamette Baseline and Meridian. The property is located in a mix of industrial, commercial, and residential properties. A commercial property with a 10,000 square foot commercial building (partially leased to McKenzie) is located immediately north of the subject property. An excavating contractor (Gary Burnett) occupies the properties immediately west of the subject property. Residential properties are located immediately south and west of the subject property.

(6/25/01 MME/SAS) A preliminary assessment and site inspection of McKenzie Chrome Plating was conducted on August 21, 1984. As of 1984, the site specialized in show-quality & triple-chrome plating. Metallic parts are stripped, cleaned, ground, and plated by the business. Electroplating, cleaning, stripping, and pickling occur over a concrete floor within an area surrounded by a common 8" block concrete dike. A common catch basin connected to Springfield's sanitary sewer drains the entire plating area. There was no means to prevent spilled or leaking plating, cleaning, stripping, or pickling tank contents from entering the drain. Cyanide/brass and cyanide/copper plating baths were not segregated from acids by trenches, dikes, or other means of containment that would prevent accidental mixing of cyanide salts with acids and subsequent release of hydrogen cyanide gas. Since McKenzie Chrome Plating began operations January 1980, no sludges had been removed from stripping, cleaning, pickling, or plating baths. Approximately four times per year, spent polypropylene and activated carbon adsorption cartridges have been removed from two cylinders attached to the nickel-plating tank's recirculation system. Following rinsing, cartridges have been discarded with solid waste materials generated by McKenzie's owner/operator. On a few occasions, a small quantity of mud, which had accumulated beneath plating-area decking, had been removed from the floor and discarded with solid waste taken to the landfill.

Comment:			

(6/25/01 MME/SAS) At the time of the site inspection in 1984, the only pathway of concern was air. Copper cyanide and brass cyanide plating baths were not separated from stripping acid (HCl) tanks. There was the potential for accidental chemical mixing and subsequent release of hydrogen cyanide gas. There was also a potential for inadvertent mixing of cyanide salts and leaked or spilled acid. There did not appear to be a threat of release to the soil, groundwater, or surface water pathways.

Comment:			

(6/25/01 MME/SAS) No hazardous wastes were discovered during the August 21, 1984 site inspection.

(6/21/06 M2C/SAS) DEQ requested current information about the McKenzie Chrome Plating facility in December 2004. In 2005, DEQ received a letter from the site owner stating that he would send an update on their permits and hazardous waste. DEQ did not receive those records. In addition, the owner states there has been no spills or releases on the property.

(1/5/07 M2C/SAS) DEQ did not identify any obvious releases of hazardous substances at the McKenzie Chrome Plating site. Therefore, DEQ is not requiring any further action at this time under Oregon Environmental Cleanup Rules unless new information becomes available.

We do recommend that current and future site owners carefully evaluate the Site during any activities that may expose people or the environment to soil or soil dust or groundwater, such as during construction activities. Evaluations should include inspection for indications of possible contamination, such as chemical odors, stained soils, or unusual materials. If indications of possible contamination are found they should be followed up with appropriate sampling and laboratory analyses.

Narrative Desc:	Water Use (Current/Reasonably Likely)	Last Updated on Dt:	12/21/2004
Created by Init:	DHANSON		

Comment:

No surface water use anticipated or impacted
 Groundwater in the vicinity of the site is used for municipal purposes by Springfield Utility Board (SUB) and Rainbow Water District, who maintain water supply wells downgradient from the site. The municipal groundwater aquifer has been impacted, however sentinel wells installed between the site and SUB and Rainbow wells have never detected contamination.

Comment:

(6/23/10 DEH) Springvilla Cleaners operated at the Mohawk Shopping center until about 2000, when it closed. Spills and/or releases of the dry cleaning solvent tetrachloroethylene (PCE) occurred historically at the former cleaners and they have contaminated the soil and groundwater beneath the shopping center. Groundwater contamination has also spread off-site to the west and southwest. The shopping center is currently partly vacant, including a large former grocery store (Walmart/Winco). DEQ is currently conducting cleanup activities in the Dry Cleaner Program.

Comment:

(1/13/03 DH) Perchloroethylene (PCE) contamination was discovered at the Mohawk Shopping Center in April 2000 during an environmental investigation by a potential purchaser. A subsequent investigation by the shopping center owner traced the contamination to a broken drain line at the former Springvilla Dry Cleaners. PCE and associated breakdown products were detected at concentrations up to 7,100 ug/L in groundwater beneath the site. The shopping center owner applied to DEQ's Dry Cleaner Program in December 2001 and was accepted in January 2002.

(1/23/04 DEH) In December 2003 DEQ's contractor sampled additional beneficial use (irrigation) wells west, north and south of the site and found several wells to be contaminated with PCE above the drinking water standards. The extent of contamination from the site, however, has not been defined. Multiple sources of solvent contamination may exist.

Narrative Desc:	Remedial Action	Last Updated on Dt:	12/11/2018
Created by Init:	KDANA		

Comment:

(6/23/10 DH) DEQ initiated a focused Site Investigation at the Mohawk Shopping Center in February 2002. The full extent of the groundwater contamination has not been determined.

(2/21/03 DEH/SRS) Concentrations of dry cleaning solvent (specifically PCE) in the shallow soils and groundwater beneath the former dry cleaner and adjacent building areas are very high and could pose a health threat to occupants or workers in these buildings. Taking advantage of vacancies in both the former dry cleaner space and the former Walmart Foods space, DEQ installed aeration equipment under the concrete slab of the buildings in both of these spaces to protect occupants in the future. The work, which was done in February 2003, included installing vapor recovery piping as well as several shallow well points. The vapor recovery piping is connected to a small vacuum blower that should remove solvent vapors from beneath the

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

building. The shallow well points could allow for remote treatment of the source soils and groundwater beneath the building in the future, using biological/chemical treatments or soil vapor extraction.

(1/23/04 DEH) Shallow vapor recovery continues. DEQ is currently assessing the feasibility of additional interim remedial action measures. Currently DEQ is assessing installing a soil vapor extraction (SVE) system using the existing piping and wells beneath the building.

(Updated 6/23/10 DEH) DEQ, with cooperation from the owner, McKay Investment Company, conducted a removal action in August and September 2004 to address the source soils that were present beneath the former cleaners building. McKay removed the cleaners building and temporarily supported the former Waremart Foods building to allow DEQ's contractor to excavate about 150 cubic yards of soil from the former dry cleaning operation. The soil was treated on site by soil vapor extraction with vapor phase carbon filtration. Soil was treated to below residential risk based levels, a Contained-In Determination completed, and then sent for disposal at a Subtitle D Landfill. During excavation, DEQ's contractors installed subsurface piping near the water table to allow for injection of chemical oxidants or biological stimulants or enhancing agents. In September 2004 1,100 gallons of 4% sodium permanganate solution were injected into the gallery to help treat residual hot spot soil and groundwater contamination. Injections of an electron donor such as vegetable will be considered in the future to allow for subsequent natural degradation of residual chlorinated solvents.

(10/14/08 DEH) Groundwater bioremediation project implemented in August 2007 to reduce levels of VOCs at and downgradient of the former dry cleaners.

(6/23/10 DEH) In August 2009 DEQ injected emulsified oil into direct push borings in a grid array beneath the former Waremart store as part of the removal action to reduce shallow VOC concentrations in groundwater beneath the building and help prevent future vapor intrusion issues. The groundwater removal action recirculation activities were stopped in late August 2009. Performance groundwater monitoring and a Remedial Investigation/Feasibility Study remain as data gaps.

(12/11/18, DEH) On 3/16/18 DEQ and McKay Investments entered into a voluntary cleanup agreement to conduct a Remedial Investigation and Feasibility Study (RI/FS). Most of McKay's investigation work has been on investigating the nature and extent of the groundwater contaminant plume that is now known to extend about 1/2 mile northwest of the site. Additionally, McKay has done significant updates to and evaluating the beneficial uses of groundwater in the vicinity of the site and the plume.

Perchloroethylene (PCE) and associated breakdown products. Listed RCRA waste.

(2/8/05 DEH/SRS) Soil removed from the site during the removal action in 2004 contained listed hazardous waste when it was generated. DEQ conducted a "Contained-In" determination following soil treatment and determined that the soil no longer contained hazardous waste. The treated soil contained PCE at levels below DEQ's residential soil RBCs. The soil was transported to a subtitle D landfill as non-hazardous.

The Springvillla Dry Cleaners site is located at 1459 Mohawk Blvd. (In 2000, Springvillla relocated to 1460 Mohawk Blvd.) (1/23/04 DEH) The former dry cleaners was located in a strip of shops attached to the building that last housed a Waremart Foods supermarket. The supermarket space has been vacant for several years.

Comment:			

Springvillla Dry Cleaners was a tenant of the Mohawk Shopping Center, and to date the only known source of contamination at the shopping center. A single large groundwater aquifer serves as the municipal water supply for the City of Springfield. Contamination from Springvillla has impacted this

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

aquifer. The nearest municipal well is about 2,400 ft NE of the site, but a proposed new well water supply would be only 2,000 ft north of the site. Groundwater flow direction is generally to the west at shallow depths, gradually turning toward the north at deeper depths. The effect of the municipal wells on the groundwater flow direction has not been determined. (1/23/04 DEH) Several residential irrigation wells have been identified in the vicinity of the Mohawk shopping center. Irrigation and industrial wells are also located at the McKenzie-Willamette hospital and at the Willamalane Park, which are southwest of the site.

(2/21/03 DEH/SRS) A monitoring well was installed between the site and the Springfield Utility Board (SUB) supply well in 2002. Dry cleaning chemicals were not detected in this monitoring well, but were detected in at least one nearby residential irrigation well at very low levels. The nature and extent of groundwater contamination still needs to be investigated, but there does not appear to be an imminent threat to SUB water supply wells at this time.

Comment:			

(2/21/03 DEH/SRS) Groundwater contamination from this site threatens the aquifer from which the City of Springfield (Springfield Utility Board) draws its municipal supply. Groundwater beneath the neighborhoods west of the site is also tapped by private irrigation wells, although the number and location of these wells are not well understood. Further investigation into groundwater use and the extent of off-site contamination is needed to better understand the potential threats to nearby residents.

(12/21/04 DEH/SRS) Vapors from contaminated soil and/or shallow groundwater may also be a threat to people indoors above the contamination. Air samples collected in the former Waremart building initially contained PCE and TCE above occupational exposure levels. This building is currently not occupied. Removal activities conducted in August and September 2004 removed the most contaminated soil, and installed a vapor recovery system and vapor barrier, which should protect workers in the building in the future.

Comment:			

(DEH-11/01/2021) Springvilla Cleaners operated at the Mohawk Shopping Center, and closed around 2000. DEQ's Dry Cleaner Program conducted numerous soil and groundwater removal actions between 2004 In 2009. Groundwater contamination levels in the source area have been greatly reduced, but contamination remains in the regional beneficial use aquifer. Remedial Investigation (RI) work continues at the site conducted by the former owner. Contaminant levels at the site are below DEQ's residential and occupational risk-based criteria for vapor intrusion. Low levels of residual contamination at the site would not present an unacceptable risk to future occupants of the former Waremart building. Groundwater monitoring has shown that residual contamination beneath the site quickly migrates downward to the beneficial use aquifer, at a depth of about 45-50 feet below ground, and migrates in this zone west, northwest, and southwest of the site beneath residenail areas. This site is a high priority for DEQ because groundwater in this part of Springfield is used by the Springfield Utility board (SUB) for municipal water supply for the City of Springfield.

Springvilla Dry Cleaner operated at the Mohawk Shopping Center from the 1960s to 2000. Perchloroethylene (PCE) contamination was discovered at the shopping center during a 2000 environmental investigation by a potential purchaser. The dry operated at the site under several names, including Springvilla Cleaners and SpringVilla Coin-op. The shopping center was previously owned by the McKay Investment Company, however the shopping center was sold in 2008 to Steven Yett.

Springvilla Dry Cleaner operated at the Mohawk Shopping Center from the 1960s to 2000. Perchloroethylene (PCE) contamination was discovered at the shopping center during a 2000 environmental investigation by a potential purchaser. The dry operated at the site under several names, including Springvilla Cleaners and SpringVilla Coin-op. The shopping center was previously owned by the McKay Investment Company, however the shopping center was sold in 2008 to Steven Yett.

Comment:			

No surface water use anticipated or impacted
 Groundwater in the vicinity of the site is used for municipal purposes by Springfield Utility Board (SUB) and Rainbow Water District, who maintain water supply wells downgradient from the site. The municipal groundwater aquifer has been impacted, however sentinel wells installed between the site and SUB and Rainbow wells have never detected contamination.

(DEH-11/01/2021) Springvillage Cleaners operated at the Mohawk Shopping Center, and closed around 2000. DEQ's Dry Cleaner Program conducted numerous soil and groundwater removal actions between 2004 In 2009. Groundwater contamination levels in the source area have been greatly reduced, but contamination remains in the regional beneficial use aquifer. Remedial Investigation (RI) work continues at the site conducted by the former owner. Contaminant levels at the site are below DEQ's residential and occupational risk-based criteria for vapor intrusion. Low levels of residual contamination at the site would not present an unacceptable risk to future occupants of the former Waremart building. Groundwater monitoring has shown that residual contamination beneath the site quickly migrates downward to the beneficial use aquifer, at a depth of about 45-50 feet below ground, and migrates in this zone west, northwest, and southwest of the site beneath residenail areas. This site is a high priority for DEQ because groundwater in this part of Springfield is used by the Springfield Utility board (SUB) for municipal water supply for the City of Springfield.

(6/23/10 DEH) Springvillage Cleaners operated at the Mohawk Shopping center until about 2000, when it closed. Spills and/or releases of the dry cleaning solvent tetrachloroethylene (PCE) occurred historically at the former cleaners and they have contaminated the soil and groundwater beneath the shopping center. Groundwater contamination has also spread off-site to the west and southwest. The shopping center is currently partly vacant, including a large former grocery store (Waremart/Winco). DEQ is currently conducting cleanup activities in the Dry Cleaner Program.

(1/13/03 DH) Perchloroethylene (PCE) contamination was discovered at the Mohawk Shopping Center in April 2000 during an environmental investigation by a potential purchaser. A subsequent investigation by the shopping center owner traced the contamination to a broken drain line at the former Springvillage Dry Cleaners. PCE and associated breakdown products were detected at concentrations up to 7,100 ug/L in groundwater beneath the site. The shopping center owner applied to DEQ's Dry Cleaner Program in December 2001 and was accepted in January 2002.

(1/23/04 DEH) In December 2003 DEQ's contractor sampled additional beneficial use (irrigation) wells west, north and south of the site and found several wells to be contaminated with PCE above the drinking water standards. The extent of contamination from the site, however, has not been defined. Multiple sources of solvent contamination may exist.

Comment:						

(6/23/10 DH) DEQ initiated a focused Site Investigation at the Mohawk Shopping Center in February 2002. The full extent of the groundwater contamination has not been determined.

(2/21/03 DEH/SRS) Concentrations of dry cleaning solvent (specifically PCE) in the shallow soils and groundwater beneath the former dry cleaner and adjacent building areas are very high and could pose a health threat to occupants or workers in these buildings. Taking advantage of vacancies in both the former dry cleaner space and the former Waremart Foods space, DEQ installed aeration equipment under the concrete slab of the buildings in both of these spaces to protect occupants in the future. The work, which was done in February 2003, included installing vapor recovery piping as well as several shallow well points. The vapor recovery piping is connected to a small vacuum blower that should remove solvent vapors from beneath the building. The shallow well points could allow for remote treatment of the source soils and groundwater beneath the building in the future, using biological/chemical treatments or soil vapor extraction.

(1/23/04 DEH) Shallow vapor recovery continues. DEQ is currently assessing the feasibility of additional interim remedial action measures. Currently DEQ is assessing installing a soil vapor extraction (SVE) system using the existing piping and wells beneath the building.

(Updated 6/23/10 DEH) DEQ, with cooperation from the owner, McKay Investment Company, conducted a removal action in August and September 2004 to address the source soils that were present beneath the former cleaners building. McKay removed the cleaners building and temporarily supported the former Waremart Foods building to allow DEQ's contractor to excavate about 150 cubic yards of soil from the former dry cleaning operation. The soil was treated on site by soil vapor extraction with vapor phase carbon filtration. Soil was treated to below residential risk based levels, a Contained-In Determination completed, and then sent for disposal at a Subtitle D Landfill. During excavation, DEQ's contractors installed subsurface piping near the water table to allow for injection of chemical oxidants or biological stimulants or enhancing agents. In September 2004 1,100 gallons of 4% sodium permanganate solution were injected into the gallery to help treat residual hot spot soil and groundwater contamination. Injections of an electron donor such as vegetable will be considered in the future to allow for subsequent natural degradation of residual chlorinated solvents.

(10/14/08 DEH) Groundwater bioremediation project implemented in August 2007 to reduce levels of VOCs at and downgradient of the former dry cleaners.

(6/23/10 DEH) In August 2009 DEQ injected emulsified oil into direct push borings in a grid array beneath the former Waremart store as part of the removal action to reduce shallow VOC concentrations in groundwater beneath the building and help prevent future vapor intrusion issues. The groundwater removal action recirculation activities were stopped in late August 2009. Performance groundwater monitoring and a Remedial Investigation/Feasibility Study remain as data gaps.

(12/11/18, DEH) On 3/16/18 DEQ and McKay Investments entered into a voluntary cleanup agreement to conduct a Remedial Investigation and Feasibility Study (RI/FS). Most of McKay's investigation work has been on investigating the nature and extent of the groundwater contaminant plume that is now known to extend about 1/2 mile northwest of the site. Additionally, McKay has done significant updates to and evaluating the beneficial uses of groundwater in the vicinity of the site and the plume.

Perchloroethylene (PCE) and associated breakdown products. Listed RCRA waste.

(2/8/05 DEH/SRS) Soil removed from the site during the removal action in 2004 contained listed hazardous waste when it was generated. DEQ conducted a "Contained-In" determination following soil treatment and determined that the soil no longer contained hazardous waste. The treated soil contained PCE at levels below DEQ's residential soil RBCs. The soil was transported to a subtitle D landfill as non-hazardous.

The Springvillage Dry Cleaners site is located at 1459 Mohawk Blvd. (In 2000, Springvillage relocated to 1460 Mohawk Blvd.) (1/23/04 DEH) The former dry cleaners was located in a strip of shops attached to the building that last housed a Waremart Foods supermarket. The supermarket space has been vacant for several years.

Springville Dry Cleaners was a tenant of the Mohawk Shopping Center, and to date the only known source of contamination at the shopping center. A single large groundwater aquifer serves as the municipal water supply for the City of Springfield. Contamination from Springville has impacted this aquifer. The nearest municipal well is about 2,400 ft NE of the site, but a proposed new well water supply would be only 2,000 ft north of the site. Groundwater flow direction is generally to the west at shallow depths, gradually turning toward the north at deeper depths. The effect of the municipal wells on the groundwater flow direction has not been determined. (1/23/04 DEH) Several residential irrigation wells have been identified in the vicinity of the Mohawk shopping center. Irrigation and industrial wells are also located at the McKenzie-Willamette hospital and at the Willamalane Park, which are southwest of the site.

(2/21/03 DEH/SRS) A monitoring well was installed between the site and the Springfield Utility Board (SUB) supply well in 2002. Dry cleaning chemicals were not detected in this monitoring well, but were detected in at least one nearby residential irrigation well at very low levels. The nature and extent of groundwater contamination still needs to be investigated, but there does not appear to be an imminent threat to SUB water supply wells at this time.

Comment:			

(2/21/03 DEH/SRS) Groundwater contamination from this site threatens the aquifer from which the City of Springfield (Springfield Utility Board) draws its municipal supply. Groundwater beneath the neighborhoods west of the site is also tapped by private irrigation wells, although the number and location of these wells are not well understood. Further investigation into groundwater use and the extent of off-site contamination is needed to better understand the potential threats to nearby residents.

(12/21/04 DEH/SRS) Vapors from contaminated soil and/or shallow groundwater may also be a threat to people indoors above the contamination. Air samples collected in the former Waremart building initially contained PCE and TCE above occupational exposure levels. This building is currently not occupied. Removal activities conducted in August and September 2004 removed the most contaminated soil, and installed a vapor recovery system and vapor barrier, which should protect workers in the building in the future.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program:

[DOE FUSRAP](#)

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List:

[NPL](#)

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

National Priority List - Proposed:

[PROPOSED NPL](#)

Sites proposed - by the EPA, the state agency, or concerned citizens - for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

Deleted NPL:

[DELETED NPL](#)

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

SEMS List 8R Active Site Inventory:

[SEMS](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Sep 28, 2022

Inventory of Open Dumps, June 1985:

[ODI](#)

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites:

[SEMS ARCHIVE](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Sep 28, 2022

Comprehensive Environmental Response, Compensation and Liability Information System -

[CERCLIS](#)

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:

[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:

[RCRA CORRACTS](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Sep 5, 2022

RCRA non-CORRACTS TSD Facilities:

[RCRA TSD](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Sep 5, 2022

RCRA Generator List:

[RCRA LQG](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Sep 5, 2022

RCRA Small Quantity Generators List:

[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Sep 5, 2022

RCRA Very Small Quantity Generators List:

[RCRA VSQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Sep 5, 2022

RCRA Non-Generators:

[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Sep 5, 2022

RCRA Sites with Controls:

[RCRA CONTROLS](#)

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Sep 5, 2022

Federal Engineering Controls-ECs:

[FED ENG](#)

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Oct 27, 2022

Federal Institutional Controls- ICs:

FED INST

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Oct 27, 2022

Land Use Control Information System:

LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites:

NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Jul 26, 2022

Emergency Response Notification System:

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System:

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System:

ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Aug 28, 2022

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:

FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 13, 2022

FEMA Underground Storage Tank Listing:

FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan:

[FRP](#)

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Delisted Facility Response Plans:

[DELISTED FRP](#)

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Historical Gas Stations:

[HIST GAS STATIONS](#)

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries:

[REFN](#)

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Aug 30, 2022

Petroleum Product and Crude Oil Rail Terminals:

[BULK TERMINAL](#)

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jun 29, 2022

LIEN on Property:

[SEMS LIEN](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Sep 28, 2022

Superfund Decision Documents:

[SUPERFUND ROD](#)

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Sep 28, 2022

State

Confirmed Release List/Inventory:

[CRL](#)

List of sites on the Oregon Department of Environmental Quality (DEQ)'s Confirmed Release Inventory, a subset of the Environmental Cleanup Site Information (ECSI) database. ECSI is the Cleanup Section's master database of sites with known or potential contamination. This database is state equivalent CERCLIS.

Government Publication Date: Sep 12, 2022

Environmental Cleanup Site Information Database:

[ECSI](#)

The Department of Environmental Quality's (DEQ) Environmental Cleanup Program protects human health and the environment by identifying, investigating, and remediating sites contaminated with hazardous substances. This database is state equivalent CERCLIS.

Government Publication Date: Sep 12, 2022

Delisted Release List and Cleanup Sites:

[DELISTED SHWS](#)

This database contains a list of closed sites contaminated with hazardous substances that were removed from the Oregon Department of Environmental Quality (DEQ)'s, Environmental Cleanup Site Information (ECSI) database.

Government Publication Date: Sep 12, 2022

Solid Waste Facilities and Landfills:

[SWF/LF](#)

The Department of Environmental Quality (DEQ) makes a list available of all permitted solid waste and landfill facilities.

Government Publication Date: Oct 7, 2020

Historic Closed and Terminated Disposal Sites:

[HIST SWF](#)

A list of historic, closed solid waste and landfill facilities made available by the Department of Environmental Quality (DEQ). Public Land Survey System (PLSS) locations provided by the source are subject to accuracy limitations inherent to the PLSS system.

Government Publication Date: Jun 1, 1986

Underground Storage Tank Cleanup List:

[LUST](#)

This inventory of leaking underground storage tanks (LUSTs) reported to the Oregon Department of Environmental Quality (DEQ), includes records made available via public records request, as well as LUST sites from the DEQ, in partnership with the Oregon Health Authority, Drinking Water Protection Program Map Viewer and the DEQ Facility Profiler-Lite Map Viewer.

Government Publication Date: Sep 19, 2022

Delisted Leaking Storage Tanks:

[DELISTED LST](#)

This database contains a list of leaking storage tank sites that were removed from the Oregon Department of Environmental Quality (DEQ).

Government Publication Date: Sep 19, 2022

Underground Storage Tank (UST) Facilities:

[UST](#)

List of underground storage tanks made available by the Oregon Department of Environmental Quality (DEQ), and Oregon State Police (OSP), Oregon State Fire Marshall (OSFM). DEQ provides records relating to Underground Storage Tank Facility, UST Facilities with Operating Certificates, and Facilities with Temporary Closure Certificates and Facilities not in Operational Compliance. OSP, OSFM provides chemical information stored in Underground Storage Tanks.

Government Publication Date: Oct 17, 2022

Drinking Water Protection Program UST:

[UST DWP](#)

A list of underground storage tank (UST) locations from the Drinking Water Protection Interactive Map Viewer made available by the Oregon Department of Environmental Quality (DEQ), in partnership with the Oregon Health Authority's Drinking Water Protection Program.

Government Publication Date: Oct 17, 2022

Hazardous Substance Information System:

[HSIS](#)

This database contains detailed information regarding the storage of hazardous substances in facilities located throughout the State of Oregon, collected through the Hazardous Substance Information Survey. It is made available by the Oregon Office of State Fire Marshal's (OSFM), Community Right to Know (CR2K) Services Unit.

Government Publication Date: Sep 5, 2017

Aboveground Storage Tanks:

[AST](#)

This list of registered aboveground storage tanks is made available by the Oregon State Police (OSP), Office of State Fire Marshal (OSFM).

Government Publication Date: Oct 17, 2022

Drinking Water Protection Program AST:

[AST DWP](#)

A list of aboveground storage tank (AST) locations from the Drinking Water Protection Interactive Map Viewer made available by the Oregon Department of Environmental Quality (DEQ), in partnership with the Oregon Health Authority's Drinking Water Protection Program.

Government Publication Date: Oct 17, 2022

Delisted Storage Tanks:

[DTNK](#)

List of sites that once appeared on - and have since been removed from - either list of UST or AST storage tank sites, or the list of Community Right to Know Hazardous Substances storage (HSIS) made available by the Oregon Department of Environmental Quality (DEQ) or the Office of the State Fire Marshall.

Government Publication Date: Oct 17, 2022

Heating Oil Tank Clean Decommissioning Sites:

TANK HOT DECOM

List of Heating Oil Tank (HOT) Clean Decommissioning Sites maintained by the HOT Program, Department of Environmental Quality (DEQ). Sites with former heating oil tanks that have a registered certificate of voluntary decommissioning (started March 2000) are filed with DEQ. Tanks on this list were closed following DEQ rules and a leak was not found.

Government Publication Date: Feb 22, 2022

Engineering Controls Reported in the ECSI Database:

ENG

The Department of Environmental Quality (DEQ) makes a list available of sites that have engineering controls in place. Engineering controls are physical measures designed to prevent or minimize exposure to hazardous substances remaining on-site. Engineering controls may include such measures as fencing, capping, horizontal or vertical barriers, hydraulic controls, or provision of clean water supplies.

Government Publication Date: Sep 12, 2022

Institutional Controls Reported in the ECSI Database:

INST

The Department of Environmental Quality (DEQ) makes a list available of sites that have institutional controls in place. Institutional controls are legal or administrative tools to prevent unacceptable exposures to contamination left in place at the completion of removal or remedial actions. Common examples are restricting groundwater use or preventing residential uses of a property.

Government Publication Date: Sep 12, 2022

Voluntary Cleanup Program Sites:

VCP

The Department of Environmental Quality (DEQ) created its Voluntary Cleanup Program (VCP) to provide oversight to property owners and others wishing to investigate and clean up hazardous substance sites in a voluntary, cooperative manner. The goal of the program is to increase the number of remediated sites by streamlining the cleanup process while ensuring compliance with Oregon environmental regulations.

Government Publication Date: Aug 16, 2022

Environmental Cleanups on Former or Current Brownfields:

BROWNFIELDS

List of Brownfields sites made available by the Department of Environmental Quality (DEQ). A brownfield is a vacant or underused property where actual or perceived environmental contamination complicates its expansion or redevelopment.

Government Publication Date: Sep 12, 2022

Tribal

Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands:

INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 10, which include Oregon.

Government Publication Date: Apr 20, 2022

Underground Storage Tanks (USTs) on Indian Lands:

INDIAN UST

USTs on Tribal/Indian Lands in Region 10, which includes Oregon.

Government Publication Date: Apr 20, 2022

Delisted Tribal Leaking Storage Tanks:

DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Apr 9, 2022

Delisted Tribal Underground Storage Tanks:

DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Apr 20, 2022

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index:

[FINDS/FRS](#)

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 2, 2020

Toxics Release Inventory (TRI) Program:

[TRIS](#)

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Aug 24, 2021

Perfluorinated Alkyl Substances (PFAS) Releases:

[PFAS TRI](#)

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Aug 24, 2021

PFOA/PFOS Contaminated Sites:

[PFAS NPL](#)

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Oct 4, 2022

Perfluorinated Alkyl Substances (PFAS) Water Quality:

[PFAS WATER](#)

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

SSEHRI PFAS Contamination Sites:

[PFAS SSEHRI](#)

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations <https://pfasproject.com/pfas-contamination-site-tracker/>

Government Publication Date: Dec 12, 2019

National Response Center PFAS Spills:

[ERNS PFAS](#)

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFFF) usage. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the US Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.

Government Publication Date: Feb 23, 2022

Hazardous Materials Information Reporting System:

[HMIRS](#)

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs:

NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Aug 30, 2022

Toxic Substances Control Act:

TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA:

HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing:

FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:

PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Sep 28, 2022

State Coalition for Remediation of Drycleaners Listing:

SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):

ICIS

The U.S. Environmental Protection Agency's Enforcement and Compliance History Online system incorporates data from the Integrated Compliance Information System - National Pollutant Discharge Elimination System (ICIS-NPDES). ICIS-NPDES is an information management system maintained by the Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. This data includes permit, inspection, violation and enforcement action information for applicable ICIS records.

Government Publication Date: Oct 15, 2022

Drycleaner Facilities:

FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jun 25, 2022

Delisted Drycleaner Facilities:

DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jun 25, 2022

Formerly Used Defense Sites:

FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

Government Publication Date: Jul 12, 2022

Former Military Nike Missile Sites:

FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents:

PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS):

MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites:

HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

MINES

The Master Index File (MIF) is provided by the United State Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Aug 3, 2022

Surface Mining Control and Reclamation Act Sites:

SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Mineral Resource Data System:

[MRDS](#)

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites:

[LM SITES](#)

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Title II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 1, 2022

Alternative Fueling Stations:

[ALT FUELS](#)

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG) fuel type locations.

Government Publication Date: Oct 10, 2022

Superfunds Consent Decrees:

[CONSENT DECREES](#)

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Sep 15, 2022

Air Facility System:

[AFS](#)

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments:

[SSTS](#)

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 30, 2022

Polychlorinated Biphenyl (PCB) Transformers:

[PCBT](#)

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers:

[PCB](#)

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Jul 28, 2022

State

Permitted Air Dischargers:

[AIR PERMITS](#)

The Oregon Department of Environmental Quality Air Quality Division maintains this list of facilities with air discharge permits. Active and temporarily closed permits are included in this list.

Government Publication Date: Nov 7, 2022

Per- and Polyfluoroalkyl Substances (PFAS):

[PFAS](#)

A list of sites from the Environmental Cleanup Site Information Database (ECSI) where Per- and Polyfluoroalkyl substances (PFAS) containing materials may be of concern. This list is made available by the Oregon Department of Environmental Quality.

Government Publication Date: Oct 13, 2022

Historical Hazardous Materials Incident Reports:

[HIST HAZMAT](#)

Since January 1, 1985, the Oregon Office of State Fire Marshal (OSFM) has collected Hazardous Material Incident Reports from emergency responders. This list also includes Clandestine Drug Sites.

Government Publication Date: Dec 31, 2009

Hazardous Materials Incident Reports:

[HAZMAT](#)

A list of Hazardous Material Incidents reported to the Oregon Office of State Fire Marshall (OSFM) from emergency responders. Covers the time period from 1986 through the current listed date.

Government Publication Date: Nov 1, 2022

Spills:

[SPILLS](#)

List of spills and/or releases reported to The Department of Environmental Quality's (DEQ) Emergency Response Program. The program is designed to carry out legislative direction to work with other agencies and industry to prevent and respond to spills of oil and hazardous materials.

Government Publication Date: Sep 30, 2022

Dry Cleaning Facilities:

[DRYCLEANERS](#)

The Department of Environmental Quality tracks registered dry cleaner facilities.

Government Publication Date: Oct 11, 2022

Delisted Drycleaner Facilities:

[DELISTED DRYCLEANERS](#)

List of facilities which once appeared on - and have since been removed from - the list of registered dry cleaning facilities made available by the Oregon Department of Environmental Quality.

Government Publication Date: Oct 11, 2022

Tier 2 Report:

[TIER 2](#)

A list of Tier 2 facilities in Oregon made available via the Oregon Community Right to Know Hazardous Substance Manager (CHS) overseen by the Oregon State Police, Office of State Fire Marshal.

Government Publication Date: Mar 26, 2019

Uninhabitable Drug Lab Properties:

[CDL](#)

List of properties which have been declared by a law enforcement agency to be unfit for use due to meth lab and/or storage activities. The properties are considered uninhabitable until cleaned up by a state certified decontamination contractor and a certificate of fitness is issued by the Oregon Health Authority, Public Health Division. This list is made available by the Department of Consumer & Business Services.

Government Publication Date: Oct 14, 2020

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.
