MEDICAL DEMOGRAPHICS

Population
1.8% ↑
by 2025

This is right in line with national average and positive because it means people are continuing to move to the area = more demand for healthcare services

Age Group
65+ ↑

The 65+ population is set to grow by nearly 2%, meaning most of the population growth is actually occurring in the 65+ segment where there is higher demand for medical services

Household Income
\$5,000 ↑

The median household income is projected to grow more than \$5,000 by 2025—this is well above national average and means disposable incomes are continuing to increase which supports more medical spending

Medical Demand
HIGH

High spending potential in medical areas such as eye, hearing, dental, vitamins & medical equipment (general use, meaning canes, blood pressure measurement, and other home-use medical equipment) these are all areas that older population rely on more heavily.

BOTTOM LINE

Tenants who are in medical fields that treat older patients are likely to do well in this location.
