OWNER-USER OPPORTUNITY

In the analysis on the following page, we assume that a user secures a 25-year, fully-amortized SBA 7A loan option with a 10% down payment and financed loan fees.

As the percentage of principal accumulation increases year-over-year, it becomes increasingly favorable to purchase instead of lease. Following are charts depicting the principal payments paid over 25 years, ending in a loan balance of zero when the building is owned free-and-clear:

PURCHASE VS LEASE ILLUSTRATION

Situation: Business owner purchases and occupies 26035 Acero for \$399/SF, with an initial investment of \$40/SF (10% down + estimated closing costs).

TAX BENEFITS OF DEPRECIATION

Assume a business owner or trust personally purchases 26035 Acero and leases it to his/her business at a market rate (this is allowable under the SBA program). Cash flow and taxable income of the business are not affected. However, this owner's personal financial situation would benefit from depreciation of the building. In terms of this scenario, depreciation is the spreading of cost over the useful life of an asset. The Internal Revenue Service allows for a tax deduction of commercial property improvements depreciation based on a 39-year life. Simply stated, a portion of the cost of the building (excluding land) reduces taxable income, and thus tax liability, for a period of up to 39 years.

In this scenario, let us assume the following facts:

Purchase Price:	\$2,709,000
Building Size:	6,790
Percentage of Building to Land:	45/55%
Owner's personal income tax bracket:	33%

The amount subject to depreciation, in this example, is 45% of \$2,709,000, or \$1,219,050. Spread over the IRS' mandated 39 years, the deduction per year is approximately \$31,258. At a tax rate of 33%, the tax savings due to depreciation is \$10,315 per year of ownership. If you are considering this on a monthly per-square-foot basis consistent with the example on the previous page, this tax savings equates to an additional ownership benefit of \$0.13/sf per month. As time progresses, the cost basis of the building is being reduced by depreciation accumulated since purchase. Should the owner decide to sell, the depreciation is recaptured and taxed, but it is at a standard 25% as opposed to the 33% ordinary income rate used when the deduction was realized. This yields an overall tax benefit during the building ownership period, especially if the building is kept and passed down to future generations.

It is important to note that this example may differ from your situation. Please consult with your tax advisor.
